VI

. . . . .
. . . . .

Tá an fear is an bhean i n-aoin-fheacht go teannta dlúth lé chéile ;
Is an sean-duine bheith céad bliadhain ní chrapfadh sé lé aois.

VII

Tá an stil ag rith go síordhaidhe, agus biotáilte dhá thaomadh ;
Tá ól ag feara an tsaoghail ann, an *jug* is an gloine lán ;
Tá gabhair bhána is caoirigh sgaptha ar gach taobh de ;
Níor bhaoghal duit choidhche go ngabhfadh ceann ar bith chun fáin.

VIII

Dá dtéigheadh do bhó thar teórainn, níor bhaoghal duit fear na comharsan ;
Ní fhacthas sneachta adtuaidh ann, ná sioc i ndéidh na hoidhche ;
Tá siamsa ag taos óg ann, tá Raghailligh ag seinm ceóil ann ;
Tá *brandy* is *punch* dhá ól ann, is dheamhan airgead dhá íoc.

IX

Tá coirce bán is eórna, tá fataí agus rud leó ann,
Lé fagháil ag fear an bhóthair, agus fáilte roimh gach aon.
Tá na sagairt ann is córta dár shiobhail ar an díóisean ;
Is a Mhary, déan mo chomhairle, gluais is tarraidh liom.

X

Tá an abhainn lé n-ar dtaobh ann, is binne tuaim san oidhche ann;
Tá bradáin uirthe ag síolrughadh, agus bric go leór ag snámh.
Is dá dtéightheá ag déanamh tighe ann, go gcruinneóghadh ort an tír ann,
Agus nó go bhfeictheá air an tuighe, ní thóigfeadh dhe a lámh.[1]

PART II

HISTORICAL DEVELOPMENT

Chapter XIII

INTRODUCTORY

281. In Part I of this work the basis of our study of Erris Irish has been synchronic. We have taken the dialect as we found it, observed its features, analysed its speech sounds, and assigned them to their phonemes. In Part II the approach will be diachronic. We shall be concerned with the evolution of the language from an earlier state.

282. The sounds are taken in the order of (i) vowels, and (ii) consonants. Under the head of vowels are taken in succession the development of long vowels and diphthongs, the development of short vowels stressed and unstressed, and the rise of epenthetic vowels. As lengthening and diphthongization of originally short vowels are dependent on changes undergone by adjoining consonants, it has been found convenient to deal with such vowel lengthening and diphthongization in the sections dealing with the consonants in question. In the sections dealing with the vowels, however, references are given to their later treatment under the head of the appropriate consonants.

283. In Part II historical spelling is taken as basis and later developments in pronunciation are often shown by the adoption of a simplified form of historical spelling, e.g. *buidhe* > *buí*, in examples where phonetic transcription is not considered necessary.

284. It should also be mentioned and made clear that in Part II, where we are not restricted by phonemic principle to the speech of one informant only, as we were in Part I (see § 20), examples are freely drawn from a number of good representative speakers in Faulmore, while noteworthy variants from different informants in Dû Chaocháin and Doohoma are also given, the authority for such variants being stated in most cases.

Chapter XIV

VOWELS AND DIPHTHONGS

Long Vowels

285. *á, ái* = **a:**, e.g. *bás, lán, fáinne.*

Exceptions—*á* is shortened to **ə** in *tráth nóna* **trə'hno:ni:**. *ái* is shortened to **a** in *tháinig* **han'ik'**. Beside a nasal *á* may have the quality of a half-open vowel (similar to Cardinal Vowel No. 6), e.g. *amháin, Mártan*; see § 83.

286. *ae/aé* = **e:** in *lae* **ʟe:**. *ae* > **əiu:** (disyllabic) in *ae* ' liver ' ; this word is monosyllabic in **əɴ əi ə sgapu: ort** *an ae ag sgapadh ort* ; the plural is **əiu:ɴti:**.

287. *ao, aoi* = **i:** normally, e.g. *braon, fraoch, caoineadh, daoine.*

Exceptions—*aoi* = **e:** in *Gaoidheal* **ge:l** and related words ; and in *aon* **e:n**, which has also variant pronunciations **a·n** and **an**. Sometimes in verse *ao* = **e:**, e.g. *caol, taobh, saor,* etc. *ao* = **əi** in *slaodán.* In surnames *ao* is elided in *Maol-*, e.g. *Ó Maolfhábhaill* **a: mla:wiʟ'**, *Ó Maolmhochóirghe* **a: mloxo:r'i:**. *aoi* > **o** in *caoicdhighis* **koki:ʃ**. In Dû Chaocháin *ao* > **əi** in *glaodhach* **gləix**, and *aoi* > **əi** in *claoite* **kləit'ə.**

288. *é* = **e:**, e.g. *é, mé, sé, lé.* > **e** in *Dé* **d'e**, e.g. *Dé hAoine* **d'e hi:n'ə.**

éa = **e:** generally, e.g. *téad, bréag, éan, géar.*

Exceptions—> **a:** in the suffix *-éan*, e.g. *oiléan, caisléan, cuiléan,* and in the verb *taisbéan* **ʃa:n**. In the suffix *-éal* **e:** remains in some words, e.g. *muinéal,* but > **a:** in others, e.g. *cinéal* > *cineál/ciolán, Mícheál* > *Micheál. éa* > **iə** exceptionally in *béadán* **b'iədа:n.**

289. *éi* = **e:** normally, e.g. *Éire, léim. céile, éirigh, éist* 'listen', differentiated from *eist* **eʃd'** ' let alone '. *éi* > **i** in the verb *léigim* and in *a leithéid* **ə l'ehid'ə**. *éi* is elided in *Lá fhéil Muire* **ʟa:l' mir'ə**, *Oidhche fhéil Muire* **i:l' mir'ə**, *Oidhche fhéil Sain Seaáin* **i:l' ʃin' ʃa:n'**, but not when neither *lá* nor *oidhche* precedes *féil*, thus *féil tSain Seaáin* **f'e:l' t'in' ʃa:n'.**

290. *eó, eói* = **o:**, e.g. *ceó, seól, feóil.* When adjoining a nasal consonant, > **u:** in some words, e.g. *inneóin* **ɪn'u:n'**.

291. *í, ío* = **i:**, e.g. *tír, trí, míle, fion, fíor, cíoch, díol.*

292. *iú, iúi* = **u:**, e.g. *fiú, ciúin.*

293. *ó,ói* = **o:**, e.g. *ór, bó, cóir.* Adjoining a nasal consonant > **u:** in some words, e.g. *mó, mónadh, óinseach,* but in most such words **o:** remains, e.g. *mór, móin.* Exceptionally > **a:** in the preposition *ó,* in *Ó* in surnames, and in the conjunction *nó. ó* is reduced to **ə** in the preposition *ós* as it occurs in the phrase *ós cionn* **əʃ k'ʊɴ**. *ó* remains in hiatus as **o:**, e.g. *cruadhóg* **kru:o:g**.

294. *ú, úi* = **u:**, e.g. *cú, úth, tús, dúil, dúinn* **du:n'/dɪn'**. Exceptionally > **u** in *lúth-ghair* **ʟufa:r'**.

Diphthongs

295. *ia, iai* = **iə** generally, e.g. *biadh* **b'iə**, *Bhriain* **vr'iən'**.

Exceptions—> **əu** in *diabhal* **d'əul**. > **i:** before a nasal in some words, e.g. *fiadhnaise* **f'i:n'iʃi:** ; before *th* in *sgiathán* **ʃg'i:ha:n** ; in hiatus before **a:** in *fiadháin* **f'i:a:n'**; in post-tonic position in *geirrfhiadh* and *carrfhiadh* **kari:**; frequently in the pronouns *iad* and *siad* when weakened in context, and in *dias* **d'i:s**. > **e:** in *dian* **d'e:n**, in the rel. fut. of the substantive verb *bhias* **v'e:s**, and in *riaghail* in phr. *riaghail Dhubhagáin* **re:l ɣu:ga:n'**.

296. *ua, uai* = **uə** normally, e.g. *ruadh, cruach, uasal, buail, duairc, uaigneach, uaisle.*

Exceptions—*ua* > **u:** before a nasal in a small number of words, e.g. *uan* **u:n/uən** ; in the words *snuadh* **sɴu:**, *nua* **ɴu:** ; in hiatus, e.g. *cruadhóg* **kru:o:g**. > **o:** in *comhluadar* **ku:lo:dər**. > **o** in *buachaill* **boxɪʟ'**. > **wu** initially in the pronominal preposition *uatha* **wufə** ; in *ualach* **wuləx**. *uabh-* > **wəu** in *uabhar* **wəuər**. *uai* > **u:** preceding a nasal in some words, e.g. *rópa ruainne* **ru:n'ə**. > **o** in weakened forms of *fuair*, e.g. *fuair sé tuilleadh* **for ʃe: t'ɪʟ'u:** ; of *chuaidh*, e.g. *chuaidh sé abhaile* **fo ʃe: wal'ə** ; of *nuair* **ɴor'/ɴer'**. > **we** initially in the pronominal prepositions *uait* **wet'**, *uaithe* **weçə**, *uainn* **weɴ'**, *uaibh* **wev'**. > **wu** in *uaim* **wum**. *uaidh* > **wəiə**. *uai* > **i:** in *smuainigh* **smi:n'i:**.

Short Stressed Vowels

297. *a* = **a** normally, e.g. *lag, cat, bacach, gadaighe, casadh, altóir, ba.*

Exceptions—> **e** in *dar* **der'**. > **u** in words in which *-án* occurs in the syllable following, e.g. *bacán* **buka:n**, *bradán* **bruda:n**, *macánta* **muka:ɴtə**, *sgadán* **sguda:n**, *sparán* **sbura:n**; similarly in *paráiste* **'pura:ʃd'ə/pə'ra:ʃd'ə**. > **u** preceding a nasal, e.g. *amadán* **umədа:n** (sporadically **muda:n**, Sb), *anáil* **una:l'**. > **o/u** in the pronominal prepositions *agam* etc., sometimes **agəm**, and usually **am** following *a fhios*. > **o** in *gabhtha* **gofi:**, and forms of the fut. and cond. of *gabhaim*, e.g. *ngabhfadh* **ŋohu:** ; in *agus* **ogəs** beside **egəs/ugəs/agəs** ; in a stressed syllable preceding *-án* where *th* or *ch* marks the inter-syllabic division, e.g. *Cathánach* **koha:nəx**. For *a* in position before *rr, rd, rn, rl* > **a:**, see § 458. With lost fricative > **əu**, **o:** in the case of *bh*, § 379 (i) ; > **a:**, **əi**, or **i:** in the case of *dh, gh*, § 359 (i). > **ã:** in *camall* **kã:fəʟ**.

298. *ai* = **a** normally, e.g. *baile, maith, cailín, ainm, aimsir, daingean, stail, sail, raithneach, tairbh.*

Exceptions—> **o** in *airde* **ord'ə**, but not in the phrase *i n-airde* **ə ɴa:rd'ə**. > **e** in *aireamhail, aibhne, gairm, saidhbhir, taidhbhse,* and in the pronominal prepositions *aige, aice, air*. > **u** or **i** in the syllable preceding *-éan* > *eán*, e.g. *caisléan* **kuʃʟ'u:n/kiʃʟ'a:n**. > **i** in *aindeóin* **ɪn'o:n'**, in *cainéal* **kin'e:l**. For *ai* > **a:** in position before *rd, rn*, see § 458. With lost fricative *ai* > **əi**, **i:**, or **a:**, § 359 (ii).

299. *ea* = **a** generally, e.g. *easbog, fear, leac, cheana, eaglais, eala, sealg.*

Exceptions—> **e/o** in *beag* **b'eg/b'og** . > **e** in *bearach* **b'erəx**, *beathadhach* **b'ehi:x** . > **o** in forms of the fut. and cond. of *do-gheibhim*, e.g. *do-gheabhadh* **johu:**, and in fut. and past participle of *treabhaim*: **tr'ofi:**. > **o/e** in the 3rd p. cond. of *treabhaim*, when a pronoun subject is not used : **hr'ohu:/hr'ehu:**. = **a** or > **o** indifferently in *deacair* **d'akir'/d'okir'**. > **i** or **u** in words that have *-án* in the unstressed syllable following, e.g. *seangán* **ʃuŋa:n**, *meannán* **m'ɪna:n**, *feadán* **f'ida:n**, *measgán* **m'isga:n**, *gearrán* **g'ira:n**, *spreasán* **sbr'isa:n**, *sreangán* **ʃruŋa:n**, *dealán* **d'ula:n**. So also in *neasgóid* **n'isgo:d'**, and in the phrase *faoi neasacht* **fi: n'isəxd**. > **o** preceding **x** in *seachrán* **ʃoxra:n**. > **a:** in position

before *rr, rd, rn*, § 458. With lost fricative > **a:** or **əi** in the case of *gh, dh*, § 359 (iii) ; > **əu** or **u:** in the case of *bh*, § 379 (ii).

300. *e* (rare) = **e**, e.g. *de* **de,** *te* **t'eh**.

301. *ei* = **e** normally, e.g. *beirt, creid, deich, deireadh, feitheamh, leitir, bheith*.

Exceptions—> **i** when adjoining a nasal, e.g. *deimhin* **d'ĭv'in'**, *deimheas* **d'ĭv'əs**, *deichneabhar* **d'ihn'u:r**, *meisge* **m'iʃg'ə**, *meinic* **m'in'ik'**, *meilt* **m'ilt'**, *neimh* **ɴ'iv'**, *seinm* **ʃiɴ'im'**, *smeig* **sm'ig'**, *teine* **t'in'ə**, *teinn* **t'iɴ'**, *geimhreadh* **g'ĭvr'u:**; **e** is retained in *meirbh* **m'er'iv'**, *meirg* **m'er'ig'**, *meitheal* **m'ehəl**. > **i** in *eiteán*, where *-eán* occurs in the succeeding unstressed syllable ; also in *teilgean* **tl'ig'ən**, *deirg* **d'ir'ig'**. > **o/e** in *ceird* **k'ord'/k'erd'**, *reithe* **rohə/rehə**. > **a** in *reimhe* **rāv'ə**. With lost fricative > **əi**, § 359 (iv).

302. *eo* (rare) = **o**, e.g. *deoch, eochair*.

303. *i* = **i** normally, e.g. *min, im, bith, tig, fir*.

Exceptions— > **a** (as well as **i**) in *innte* **ant'i:/int'i:**, *innseacht* **anʃəxd/inʃəxd**. > **e** in *ithir* **ehir'**, *idir* **ed'ir'**, *sileadh* **ʃel'u:**, *trillse* **tr'elʃə**. **e** represents *i* in a number of borrowed words, e.g. **f'ed'il'** < *fiddle*, **p'el'u:r** < *pillow*, **p'ekt'u:r** < *picture*. Cf. **f'el'ib'i:n'** (< *Philip* ?). > **u** frequently in sandhi, e.g. **ruɴ tu:** *rinn(e) tú*. With lost fricative > **i:**, § 359 (v) ; exceptionally > **əi** in *righin* **rəin'**. Beside *rith* 'act of running' occurs *raith(e)* 'act of chasing' with semantic differentiation.

304. *io* = **i/u** normally, e.g. *fionn* **f'iɴ/f'uɴ**. = **i** when *s* follows, e.g. *fios, iosgad*. = **u** in *sioc, i ngioll, giolla, aniogh* ; and initially before a nasal, e.g. *iomaire, iomchar* **umpər**, *iomarcaidh, iomdha* **umi:**, *iomramh, ionga, ionnlaogh*. > **a** (as well as **i/u**) in *ionnta* **aɴtu:/iɴtu:/uɴtu:** ; > **a** in *ionann*. With lost fricative > **u:**, 379 (iii).

305. *iu* (rare) = **u**, e.g. *tiugh* **t'uf**. > **o** in *fliuch* **fl'ox**.

306. *o* = **o** normally, e.g. *cos, bog, dorus, ord*.

Exceptions—> **u** adjoining a nasal, e.g. *cnoc* **krũk**, *ronnach* **ruɴəx**, *onóir* **uno:r'**, *lom* **ʟum**, *dona* **dunə**, *trom* **trum**. **o** remains in *mochas, mol, Nodlaig*. Occasionally > **i** as a variant of **u**, e.g. *pronntanas* **priɴtənəs/pruɴtənəs**, *clos* **klins/kluns**. > **u** when *-án* occurs in the succeeding syllable, e.g. *bogán* **buga:n** ; but **o** remains before **h** and **x**, e.g. *bothán* **boha:n**, *lochán* **ʟoxa:n**. > **u** in *ogh* **uw/uf**. > **ĭ** in the verb *mothaigh* > *muthaigh* > *muithigh*,

e.g. **wĭçə ʃe:** *mhothaigh sé*. Adjoining *r* or *s*, **o** may alternate with **e**, e.g. *osna* **osnə/esnə**, *sostach* **sosdəx/sesdəx**, *cros* **kros/kres**, *crotach* **krotəx/kretəx**, *troda* **trodə/tredə**, (*do*) *shoraidh dhiot* **hori:t/heri:t**. With lost fricative > **əu, o:** in the case of *gh*, §359 (vi), > **əu** in the case of *bh*, §379 (iv), > **õ:, u:, əu** in the case of *mh*, § 381.

307. In the case of a number of words which had both *a* and *o* in Early Modern Irish the form with *a* is the one current in Erris, e.g. *baladh, crathadh, fasgadh, falach, falamh, fastaigh*. Similarly Erris has *arcán, clach-mhóin* (but not *clach*), *calpa, capóg, caraigheacht, casgairt, mangach*.

308. *oi* = **o** in many words, e.g. *coirce, coill, sgoil*. In a large number of these there is free fluctuation between **o** and **e**. = **e** initially, or following the consonants *th, t, d, r, s*, e.g. *Oisín* **eʃi:n'**, *oibrigh* **ebr'i:**, *thoir* **her'**, *troid* **tred'**, *doiligh* **del'i:**, *soirbh* **ser'iv'**, *droichead* **drehəd**, *soillse* **selʃə**, and usually following *l, m*, e.g. *loilgheach* **ʟel'i:x**, *moill* **meʟ'**. > **i** initially in *oiléan* where **a:n** follows in the unstressed syllable. > **i** preceding a nasal, e.g. *coinneal* **kiɴ'əʟ**, *doineann* **din'əɴ**, *coinín* **kin'i:n'**, *roimhe* **rĭv'ə**, *coinneál* < *congbháil* **kiɴ'a:l**, *coimhitheach* **kĭhi:x**. With lost fricative > **əi, i:**, § 359 (vii).

309. Of the Early Modern Irish forms *coirt/cairt, croiceann/craiceann*, only the latter forms are current in Erris, thus : **kart', krak'əɴ**.

310. *u* = **u** normally, e.g. *dubh, sruth, mullach, muc, tusa*.

Exceptions—> **o** before *ch, r*, in a good many words, e.g. *ucht* **oxd**, *anuraidh* **ə'ɴorhi:**. > **i** in by-form of *tusa* **tisə**. > **o:** in *bunadhas* **bo:nu:s**. With lost fricative > **u:**, in the case of *gh*, § 359 (viii), in the case of *bh*, § 379 (v).

311. *ui* = **i** generally, e.g. *uisge, druim, duine, muinntir, Muire*. Before *s* = **u** in *cuisle*. = **u** in *buidéal*. **u** alternates with **i** in *cluiche* **kluf'ə/klif'ə**, (*an*) *bhfuil?* **wul'/wil'**, *amuigh* **ə'muç/ə'miç**. **u** is usual in *luigh sé* **lu ʃe:**. Also in certain sandhi positions where a final fricative is elided, **u** may be heard instead of **i**, e.g. **ti: mu do:** *taobh amuigh dó*, **ə'mu sə ja:rḍ** *amuigh san jard*, **ə wru do:fə** *a bhruith dóibh*. > **o** in *uirthe* **orhi:**, *uiread* **orəd**. > **e** in *uireasbhaidh* **er'əsi:**, and in one pronunciation of the surname *Mac Suibhne* **ək sevɴ'ə/sivɴ'ə**. > **a** in *stuidéar* **sdad'e:r**. With lost fricative > **i:**, § 359 (ix).

Short Unstressed Vowels

(*a*) Pretonic

312. A short pretonic vowel is obscured, i.e. = **ə**.

Examples—*abhaile* **ə'wal'ə**, *aniogh* **ə'ɴ'uf**. In a small number of words in which the stress has been attracted to the long vowel in the second syllable, the vowel of the first syllable is elided, e.g. **ra:n** *arán*, **br'a:n** *biorán*, **kro:n'** *coróin*. Similarly *dorgha* > **dru:**. Some words have two forms, one with stress shift and elision, the other without either stress shift or elision, the choice being determined by rhythm of context, e.g. **kora:n/kra:n**, *corrán* **bure:d/bre:d** *b(a)irréad*, **bir'e:d/bre:d** *Bairéad*. The verb *taisbéan* has lost its first syllable : **ʃa:nhə ʃi: ɣit' e:** *taisbéanfaidh sí dhuit é* ; also *Ameiriceá* **'m'er'ik'a:**.

313. *o* of the preverbal particle *do* is elided when it precedes an initial vowel, *fh* or *fhl* or *fhr* + vowel, e.g. *do ól* **do:l**, *do ith* **d'iç**, *do fhágaibh* **da:gi:**, *do fhliuch* **dl'ox**, *do fhreagair* **dr'agir'**.

314. A pretonic **ə** is affixed analogically to a small number of adverbs, e.g. *riamh* **ə'r'iəw**, *choidhche* **ə'xi:ç(ə)**, *chomh maith* **əxə maç/axə maç**.

(*b*) Post-tonic

315. Post-tonic *a, o, u, ea, (io, iu)* > **ə** normally, e.g. *salach, easbog, agus, coileach*.

Exceptions—Sometimes with shifting of stress *a* > **u**, e.g. *agam* **ə'gum,** *agat* **ə'gud**. Frequently in the word *uiread* Sb elided post-tonic **ə**, and always in the phrase *acht uiread* **ax ord** ; similarly in (*go breaghdha*) *dóchasach* **do:xsəx**. With lost fricative > **u:**, sometimes **i:** in the case of *gh*, § 362, > **u:** in the case of *bh, mh*, § 383. For post-tonic *-a* in final open position see §§ 317 sqq.

316. Post-tonic *ai, oi, ui, i* > **i** normally, e.g. *carraig, easbuig, innis*.

Exceptions—> **i:** in *éigin* **ə'k'i:nt'**, *sochraide* **sokri:d'/soxri:d'**. With lost fricative > **i:** or **ə** in the case of *gh*, §§ 361, 369, > **i:** in the case of *bh, mh*, § 388, > **i:**, > **u:**, § 389.

317. It is convenient to take together post-tonic *-a* and *-e* occurring in open final position. *-e* is lost in *foighide* **fəid'** and *sochraide*[1]. *-a* is dropped from the plur. of the adjective suffix *-ach*. Normally post-tonic *-a, -e* > **ə**. As already mentioned in § 242, **ə** representing *-a, -e* at the end of a breath-group, and before a silence, is regularly elided when a voiceless consonant immediately precedes. This terminal elision takes place in the case of singular nouns and certain adjectives, but never in case of plural nouns. These require a strong clearly distinctive suffix which they cannot afford to discard, and which therefore is not subject to elision. **i:** has established itself as the plural desinence *par excellence* for nouns of nearly all classes. Thus **i:** is substituted for **ə** (representing *-a, -e*) in *bróga* **bro:gi:**, *cailleacha* **kaʟ'əxi:** ; and with combination of endings in *bailte* **balt'i:**, *tighthe* **t'if'i:**, where no epithet follows.

318. **i:** was a regular development of the np. *-aidhe* as in *pápaidhe*, and of the dp. *-aibh* as in *brógaibh*, and has become generalized. In interior position within an utterance, however, when an attributive adjective or defining genitive follows a plural noun in close sequence, the substitution is not made and the original short vowel **ə**, representing *-a* or *-e*, is retained.

Examples—*na cosa beaga, na cailleacha dubha, bailte móra, slata mara*. When not thus linked to an epithet these plurals are respectively *cosaí, cailleachaí, bailtí, slataí*.

319. In the case of a small number of disyllabic nouns also with ds. in *-(a)idh* this substitution of **i:** for **ə** representing *-e* is made in the singular. Thus ns. form *teine* **t'in'ə** is replaced by ds. form *teinidh* **t'in'i:**, ns. form *léine* **ʟ'e:n'ə** by ds. form *léinidh* **ʟ'e:n'i:**, *file* > **f'il'i:** in the ns., and so by analogy in certain other disyllabic nouns, e.g. *béile* > **b'e:l'i:**, and *céile* > **çe:l'i:** in phrases such as *lé chéile*. But when linked with an epithet or defining genitive *teine, léine*, etc. retain their original ns. ending, e.g. **t'in'ə wãç** *teine mhaith*.

320. In the emphasizing enclitic *-ne, e* > **i:** by substitution, e.g. *sinne* **ʃiɴ'i:**, *linne* **l'iɴ'i:**. In the case of participles, *-a, -e* > **i:** by substitution of ending.

Examples—*briste* **br'iʃd'i:**, *déanta* **d'i:ɴti:**, *gearrtha* **g'a:rhi:**. So also with adjectives of similar formation, e.g. *sásta* **sa:sdi:**, *sona* **suni:**, *préachta* **pr'e:xdi:**. But in interior position within a breath-group the final vowel remains unlengthened as regular

[1] and apparently in *íde*, to judge from t. 123.

ə, e.g. *caile síos*, and may be elided before another vowel, e.g. *buailt' aige*.

321. *-e* in the 3rd p. sg. fem. and *-a* in the 3rd p. pl. of prepositional pronouns are replaced by **i:** and **u:** respectively. Thus the prepositions *ag, ar, as, i, roimh*, give :—

3rd p. sg. fem. **ek'i:**, **orhi:**, **aʃd'i:**, **int'i:**, **rimp'i:** ;
3rd p. pl. **oku:**, **orhu:**, **asdu:**, **ɯntu:**, **rumpu:**.

322. The endings ***çi:** and ***fu:** are inadmissible in the Erris dialect. Their place is taken by **-çə** and **-fə** respectively in the 3rd p. sg. fem. and the 3rd p. pl. of prepositional pronouns. Thus *de, do, fá, lé, ó*, give :—

3rd p. sg. fem. **diçə**, **diçə**, **fu:çə**, **l'e:çə**, **weçə** ;
3rd p. pl. **di:fə**, **do:fə**, **fu:fə**, **l'o:fə**, **wufə**.

This **ə** of **-çə** and **-fə** is subject to elision in terminal position, for which see § 242.

323. Nouns ending in *-acht* are without inflexion in the gen. sg., e.g. *gléas marcaigheacht, slatóg dhraoidheacht*. In accordance with § 242, nouns ending in *-cha, -chta*, drop the final *a* when uttered in isolation or when terminating a breath-group, e.g. *lach'*. In a speech chain, however, they retain their vowel when a consonant follows. Conversely, words such as *loch, drúcht, ríoghdhacht, udhacht*, have acquired the suffix **ə** in certain contexts. So, too, *ubhall* > **u:lə**.

324. *gobha, togha* normally retain their final vowel (except when elided preceding a vowel), and so, too, *trágha*, e.g. **kil'ən tra:wə** *cuileann trágha*, **ənə tra:wə** *chun na trágha*. *réalta* is in isolation **re:lt**, but in a chain the final vowel re-appears, e.g. **re:ltə nə manʼə** *réalta na maidne*.

325. Final *-e* in original disyllables in which a medial fricative has become vocalized is absorbed in the resultant monosyllable in certain contexts, but more usually it remains unabsorbed. It is unabsorbed when such a word is uttered in isolation, and also when in an utterance it precedes a word beginning with a consonant.

Examples—*suidhe* **si:/si:ə**, *luighe* **li:/li:ə**, *loighe* **ləi/ləiə**; also *uaidh* **wəi/wəiə**. Similarly in the case of disyllables in which final *-(a)idh, -(a)igh* follows a vocalized fricative two forms are current, thus : *dumhaigh* **dũ:i:/dũ:jə**, *Dáibhídh* **da:i:/da:jə**. So,

too, in the case of *-aighe*, e.g. *dá bhrodhaighe* **a: wro:i: / a: wro:jə**. It should be mentioned that there are certain words in this category which never seem to retain final *e* in any context, for example *buidhe* **bi:** and *croidhe* **kri:**.

326. Rules governing the distribution of alternatives (for such words as have them) are not easy to formulate. It may help, therefore, to give further examples illustrating usage : *cloidhe* **kləiə klox**, **kləiə nə pa:rk'ə**, **lorəg ə xləiə** ; *bráighe* **er' mə wra:jə jl'e:g'əl** ; *fighe* **f'i:ə nə pa:rdo:g'ə** ; *nighe* **ya: n'i:ə he:n'** ; *óighe* **e:n' v'ik' nə ho:jə** ; *Géidhe* **bal'ə her' in'iʃ g'e:jə** ; *aghaidh* **ən əiə nə gr'e:n'ə**, **t'i:xd ən əiə** ; *cumhaidh* **l'e: kũ:jə** ; *dumhaigh* **sə dũ:jə ʃin'**, **dũ:jə yu: 'hu:mə**.

Epenthetic Vowels

327. Svarabhakti or the separation of two adjoining consonants by the insertion of an epenthetic vowel between them is a development of Irish in general but its progress has not been uniform for the whole country. In Erris an epenthetic vowel occurs regularly between a liquid (*l, n, r*) preceded by a short vowel and a following labial or velar plosive or fricative (other than *p, c*) or *m*, as set out in the following table :—

After *l* when followed by *b, m, bh, g*, — ;
,, *r* ,, ,, ,, *b, m, bh, g, ch* ;
,, *n* ,, ,, ,, *b, m, bh*, —, *ch*.

328. Between velars the epenthetic vowel is **ə** ; between palatals it is **i**.

Examples—after *l* : *Albain* **aləbin'**, *calm* **kaləm**, *balbhán* **baləwa:n**, *colg* **koləg** ;
after *r* : *coirb* **ker'ib'**, *gorm* **gorəm**, *tairbh* **tar'iv'**, *dearg* **d'arəg**, *dorcha* **dorəxə**;
after *n* : *leanbaidhe* **l'anəbə**, *seinm* **ʃin'im'**, *bainbh* **ban'iv'**, *seanchas* **ʃanəxəs**.

Epenthesis before *gh* in a phrase occurs in the placename *Cill Ghallagáin* **k'il'ə yaləga:n'**.

329. Where a long vowel or diphthong precedes the liquid, no epenthetic vowel has developed, e.g. *léargus* **l'e:rgəs/l'e:rdəs**,

iargcúil **iərgu:l'**, *Port Láirge* **la:rg'ə**. But in the case of an originally short vowel subsequently lengthened in position, an epenthetic vowel sometimes develops, e.g. *gearr-chaile* **g'a:rəxal'ə/g'a:rxal'ə/ g'a:xral'ə**.

330. An epenthetic vowel occurs between *m* and *l* in *simnéar* **ʃim'il'e:r**, and between *r* and *n* in monosyllables, e.g. *dorn* **dorəɴ**, *Port an Chairn* **port ə xa:riɴ'**. There is one example between *t* and *l* in *Caitlín* **kat'il'i:n'**, also pronounced **katl'i:n'**.

331. Where **p, f, k**, that have developed respectively from original *b, bh, g*, follow a liquid, svarabhakti is found. This had actually developed before these consonants became devoiced in the particular words concerned.

Examples—*colpa* < *colbtha*[1] **kaləpə**, *colpach* < *colbthach*[1] **koləpəx**, *marbhtha* **marəfə**, *seargtha* **ʃarəki:**. For *deirbhshiúr* both **d'er'əhu:r** and **d'er'hu:r** are in current use.

332. Exceptionally AOS had an epenthetic vowel between **ʃ** and **ʟ'** in the word *sleaghán* **'ʃiʟ'a:n** while the general pronunciation of Sb and others was **ʃʟ'a:n**.

333. Epenthetic vowels have subsequently developed on the same lines as other unstressed short vowels. With lost fricative (non-palatal) > **u:**, sometimes **i:** ; (palatal) > **i:**, §§ 361 sq.

Note—Epenthesis occurred at the intermediate stage of the development of *tarbh* and such words (in § 385), thus *tarbh* > **tarabh* > *tarú*. So too an epenthetic vowel developed between *r* and *gh* at an intermediate stage of the evolution of *dorgha*, thus *dorgha* > **doragha* > **dorú* > *drú*.

[1] O'Rahilly, Ir. Dial. p. 202, points out that the epenthetic vowel in these two words 'must have arisen not later than the 13th century, before *th* had ceased to be a dental spirant and acquired the value of *h*.'

Chapter XV

CONSONANTS

Plosive Consonants

334. The plosives *b, d, g, p, t, c* remain generally in all positions. Cases of plosives lost or changed are not numerous.

335. Assimilation of medial *d* to a following *l* has occurred in *codladh* **koʟu:** and Fódla **fo:ʟə**, and to a following *n* in *céadna* **k'e:nə**. Of this assimilation there is evidence already in E. Mod. Ir. *d* is similarly assimilated to *n* in *maidne* (gen. of *maidin*) **maɴ'ə**. *d* is assimilated to a preceding *n* in the compounds *aon-duine, sean-duine*. Unassimilated forms of *aon-duine* and *sean-duine* also occur. *d* is also assimilated in *na hIndiacha*.

336. *tn* has become *thn* in *Breatnach* **br'ahnəx** and in the various parts of the verb *taitnigh*, e.g. pret. *thaitnigh* **hahn'i:**, vn. *taitneamh* **tahn'u:**. In the speech of AOS these were pronounced **haṭn'i:** and **taṭn'u:** respectively, that is to say with nasally exploded unaffricated **ṭ**.

337. *d* is lost in *Pádraig*. *adubhairt* has come to be wrongly analysed as *d'ubhairt* ; hence such dependent forms as **gər u:rt'**, and passive **hu:ru:**. *d* is lost by haplology in *Dé Dardaoin*, which becomes *Dé ardaoin* **d'er'di:n'**. *do* preceding a vn. with infinitive function is reduced to **ə** preceding a consonant, and is silent preceding a vowel. Likewise *de* before a surname > **ə**, e.g. **ʃa:n ə bu:rk** *Seaán de Búrca*. *d* is lenited in *dheamhan* **ju:n** employed with negative force, and in *dhá-fhear-dhéag* **ɣa:re:g**.

338. The simple prepositions *de, do* have fallen together as (leniting) *go* **gə**. The corresponding pronominal forms either retain *d* (non-palatal) or when lenited have **ɣ**. The preposition *de* is entirely omitted preceding an initial consonant in the following word in certain expressions relating to time, e.g. **əɴ tra: ʃo vl'iən'** *an tráth seo de bhliadhain*, **ən' çe:d v'i: hãwru:** *an chéad mhí de shamhradh*, but is retained preceding a vowel, e.g. **əɴ darə m'i: gõ:wər** *an dara mí d'fhoghmhar*.

339. Preceding **a** in the word *fhear*, *de* > **gə j** with all good speakers, and also with some in **gə jaɪəx** *de eallach*, **gə jarəx** *de carrach*. See further § 495(ii).

340. In the lenited forms of the pronominal prepositions **ɣum** *dhamh*, etc., **ɣ** is commonly elided when *r* precedes.

341. *d/dh* is more frequently elided than retained in *d(h)á*, e.g. **a: d'e:d̪ ʃe:** *dhá dtéigheadh sé*, **a: wã:hir'** *dhá mháthair*.

342. The preverbal particle *do* is omitted in the preterite, imperfect, and conditional before a verb commencing with a consonant, e.g. **xir'** *do chuir*, **xir'u:** *do chuireadh*. In relative construction it is represented by **ə** following a final consonant in the preceding word, e.g. **ən' f'ar ə xir'** *an fear do chuir*; following a vowel in the end of the preceding word the **ə** is elided, e.g. **ən' t'e: xir'** *an té do chuir*. For *do* with vowel elided before a verb beginning with a vowel, *fh*, *fhl*, or *fhr* + vowel, see § 313.

343. **g** is regularly silent in *agam*, *againne* when *a fhios* follows, e.g. **v'i:s um k'e:n' ʟ'e:m' ə ho:k'ɪn'** *bhí a fhios agam cia an léim do thógfainn*, **nax wil' əs am e:** *nach bhfuil a fhios agam é*, **n'i:l' əs an'i:** *ní fhuil a fhios againne*.

344. Final *g* (or *c*) is lost in *teagasg* (*teagasc*). This possibly has developed through metanalysis of *teagasc Críostaidhe* as *teagas cCríostaidhe*, and is very probably influenced also by the semantically related *oideas* and *seanchas*. Cf. the converse, evidenced for Donegal,[1] *seanchas* > *seanchasc*.

345. Final *g* in a short unstressed syllable > *c*, e.g. *carraig* > *carraic*, *Nodlaig* > *Nollaic* gen. *Nollac*, *roilig* > *roilic*, *Pádraig* > *Páraic*, *easbog* > *easboc*, *comhrag* > *comhrac*.

346. Medially *g* > *c* in *gealagán* > *gealacán*, *buidheagán* > *buidheacán*, but remains unchanged in *carragán* and *cairrgín*. In the ordinal *cúigeadh* **ku:k'u:** medial *g* > *c* due to an analysis into *cúig* + *hú*, but not in the name for a 'province' (lit. 'fifth'). *g* is usually, but not always, replaced by *d* in *léargus*.

347. *g* of the preposition *ag* is always elided before a vn. commencing with a consonant, e.g. **ə kant'** *ag cainnt*, **ə tred'** *ag troid*. Before a vn. commencing with a vowel, *g* is retained

[1] Quiggin, §§ 138, 416.

as **g** or **g'** according to the quality of the vowel that follows, e.g. **əg a:rdu:** *ag ardughadh*, **əg' i:ʃɪ'u:** *ag ísliughadh*.

348. *gach*, when it precedes *aon* or *uile*, is to be regarded as a proclitic. In such cases the *g* is elided and the vowel *a* is either obscured in quality or elided, e.g. **ə xe:n/xe:n** *gach aon*, **ə xil'ə/xil'ə** *gach uile*. *g* is elided also in *acht go*, e.g. **axə sgoçəmid' e: ʃo** *acht go sgoitheamuid é seo*.

349. *t* > *d* in *cunntae* **kundə:**, *cunntas/cundas* **kundəs.**

350. Classical *t'*, *th'*, *h'*, representing the possessive adjective *do* before a vowel does not seem to have left any trace in the dialect.

351. *t* > *th* initially in *thimcheall* **himp'əl**, in the preposition *thar*, and all its related pronominal and adverbial forms.[1]

352. *c* > *ch* before *t* in *doctúir* **doxdu:r**, and before *l* in *baclainn* **baxlɪn'**. The lenited form only, i.e. *ch*, occurs in *chomh* and *chois*.

353. In eclipsis *bp*, *dt*, *gc*, = *b*, *d*, *g*. Similarly in *éagcóir*, *éadtrom* and their likes *gc*, *dt* = *g*, *d*. There is one notable exception among these, viz. *éidtreórach* **e:tr'o:rəx**.

354. For the devoicing of plosives when followed by *th*, *f*, *ch*, see §§ 401, 406, 408 respectively.

355. For the interchange of palatal and non-palatal plosives see §§ 459 sq.

Fricative Consonants

DH, GH

356. The dental fricative, except for certain cases in sandhi, became merged with the velar during the Middle Irish period. In E. Mod. Ir. *dh* and *gh*—apart from the exceptional cases just mentioned—both represent the same sound and often interchange. Here for convenience *gh* will be used to refer to both, but words cited as examples will retain their historical spelling.

357. Initial non-palatal *gh* = **ɣ**, e.g. *an ghaoth*, *a dhuine*. Initial palatal *gh* = **j**, e.g. (*do*) *ghéill*, *a dheireadh*. Exceptionally *gh* > **w** in the phrase *ar ghualainn* **er' wuəlɪn'**.

[1] Final *t* is lost in *acht*.

358. Medial *gh* becomes silent with coalescence of two syllables into one when a vowel immediately follows, e.g. *fagháil* > *fáil*, *sleaghán* > *sleán*, *meadhán* > *meán*, *léigheann* ('learning') > *léan*.

Exceptions—(i) There is no coalescence of syllables when a long vowel or diphthong precedes and a long vowel follows, e.g. *cruadhóg* **kru:o:g**, *fiadháin* **f'i:a:n'**, *sídheóg* **ʃi:o:g**.

(ii) Disyllables in which the vowel following palatal *gh* is a final open short vowel remain disyllabic in certain contexts. Thus for *fighe* both **f'i:ə** and **f'i:** occur. See further §§ 324—6.

(iii) There is conflict in the case of verbs with monosyllabic stem ending in *gh*. In these *gh* either remains as **j** or becomes **ç** and there is no coalescence of syllables when an ending is added (§ 577).

Examples—*léigheann* **L'e:jəN**, *cráidhim* **kra:jim'**, *brúighim* **bru:jim'**, *dóigheann* **do:çəN**. Note *téigheann* 'goes' is monosyllabic.

(iv) Medially in a small number of words *g* replaces *gh*, e.g. *cádhas* > *cágas*, *ródha* > *rógannta*, *diadha* > *diagannta*, *síodhaighe* > *síogaí*, *gléigheal* > *gléigeal*.

(v) *gh* > **v'** in *guidhe* **giv'ə**, and in the surname *Mhag Uidhir* **ə giv'ir'**.

(vi) *gh* > **w** in *cuileann trágha* **tra:wə**, where it is probably affected by the vn. *trághadh* **tra:w**.

359. When *gh* is lost there is compensatory lengthening or diphthongization of the preceding short stressed vowel as follows :—

(i) *a* > **a:**, e.g. *adhbar* **a:wər**, *adhmad* **a:məd**, *Maghnus* **ma:nəs**, *Raghnall* **ra:nəL**, *faghaim* **fa:m'**. > **əi**, e.g. *Tadhg* **təig**, *aghaidh* **əiə**, *traghan*[1] **trəin**, *adharc* **əirk**, *ladhar* **Ləir**, *gaghar* **gəir**. > **i:** in *Ó Raghailligh* **a: ri:L'ə**.[2]

(ii) *ai* > **əi**, e.g. *Taidhg* **təig'**, *maighdean* **məid'ən**. Exceptionally > **a:** in *maighistir* > *maghaistir* **ma:ʃd'ir'** ; > **i:** in *snaidhm* > *snuidhm* **sNi:m'** ; > **e** in *taidhbhse* > *toibhse* **tevʃə**, *saidhbhir* > *soibhir* **sev'ir'**.

(iii) *ea* > **a:**, e.g. *breaghdha* **br'a:**, *bleaghan* **bl'a:n**, *feadhan* **f'a:n**, *leaghadh* **L'a:w** ; > **əi** in *meadhair* **m'əir'**.

(iv) *ei* > **əi**, e.g. *leigheas* **L'əis**, *eidhean* **əiN**.

(v) *i* > **i:**, e.g. *Brighid* **br'i:d'**, *figheadóir* **f'i:do:r'**, *dligheadh* **dl'i:w**. Exceptionally > **iə** in *tighearna* **t'iərNə** ; > **əi** in *righin* > *roighin* **rəin'**.

(vi) *o* > **əu**, e.g. *bodhar* **bəur**, *togha* **təuə** ; > **o:**, e.g. *brodhach* **bro:x**, *foghlaim* **f'o:lim'**, *foghmhar* **fõ:wər**, *foghain* **fo:n'**. Note, when *ogh* is followed by *a* or *aidh* in open final position, no coalescence of syllables occurs, e.g. *Lá an Logha* **Ləuə**.

(vii) *oi* > **əi**, e.g. *foidhide* **fəid'**, *loighead* **Ləid**, *soighead* **səid**, *oighre* **əir'ə**, *loighe* **Ləiə** ; > **i:** in *oidhche* > *uidhche* **i:çə**, *croidhe* > *cruidhe* **kri:**.

(viii) *u* > **u:**, e.g. *ughdar* **u:dər**, *amudha* **ə'mu:**.

(ix) *ui* > **i:**, e.g. *buidhe* **bi:**, *suidhe* **si:ə**.

360. When the vowel preceding *gh* was unstressed, either **i:** or **u:** results. This is true also of epenthetic vowels.

361. When *gh* was palatal the resultant vowel is **i:**, e.g. *cruinnighim* **kriN'i:m'**, *éirghe* **e:r'i:/er'i:**, *fiafraighe* **f'iərhi:**, *gadaighe* **gadi:**, *cuirfidhear* **kir'hi:r**, (*do*) *bhrisfidhe* **vr'iʃi:**, *soilgheas* **sel'i:s**, *athchuinghe* **axin'i:**. Exceptionally *-aighe* > **u:** in *corraighe* **koru:**, by substitution of ending.

362. (i) When *gh* was non-palatal, the resultant vowel is commonly **u:**, e.g. *bunadhas* **bo:nu:s**, *urradhas* **oru:s**, *ísliughadh* **i:ʃL'u:**, *méanfadhach* **m'e:nhu:x**, *diomdha* **d'umu:**, and in the plural suffix *-eadha*, e.g. *faithneadha* **fahn'u:**.

(ii) In other words the resultant vowel is **i:**, e.g. *garrdha* **ga:ri:/gari:**, *feadghail* **f'adi:l'**, *Aonghus* **uni:s**, *Carghas* **kari:s**, *ealadhain* **ali:n'**, *iomdha* **umi:** ; and generally in the plural suffix *-adha* > *-aidhe*.

363. Following a consonant *dh* is silent in the adjective suffix *-dha*, e.g. *stuamdha* **sduəmə**, *gruamdha* **gruəmə**, *muinnteardha* **mint'ərə**.

364. The group *-thgh-* gives **ɣ** in *athghróigeadh* **'aɣro:g'u:** ; > **k'** in *aithghiorra* **ak'ərə** ; > **f** in *lúth-gháir* **Lufa:r'**.

[1] In an original disyllable in which *agh* or *aigh* (> **əi**) is followed by *-an(n)*, *-al(l)*, *-ar*, coalescence of syllables does not take place when the word occurs in pausa, but usually does when the word is in context.

[2] Pronounced **a: rəiL'ə** in Dú Chaocháin.

365. For *ghth* > *ch*, *f*, see § 403.

366. Final *gh* when non-palatal (i) in a monosyllable disappears following a diphthong or long vowel, e.g. *ruadh* **ruə**, *biadh* **b'iə**, *grádh* **gra:** ; and also following stressed *ea* in a few monosyllables, e.g. *is eadh* **ʃa/ʃah**, (*ar*) *feadh* **f'a** ;

(ii) > **w** in monosyllabic verbal nouns and in those that have become monosyllabic, e.g. *reódh* **ro:w**, *leaghadh* **l'a:w**, *téaghadh* **t'e:w** ; similarly in *dligheadh* **dl'i:w**. Exceptionally it disappears in *dódh* **do:** ;

(iii) > **f** in the pass. pret. and in the act. impv., impf., past subj., and cond. of verbs, when preceded by a long vowel or a vowel that has become long by compensatory lengthening, and when not followed by an *s*-pronoun subject, e.g. (*do*) *hinnsíodh* **hinʃi:f**, *bíodh* **b'i:f**, (*dá*) *bhfaghadh* **wa:f**, (*do*) *bhalaigheadh* **wali:f**, (*do*) *théigheadh* **he:f**, (*go*) *bhfuighbheadh* **wi:f**, (*do*) *chóireóghadh* **xo:r'o:f**.

(iv) When an *s*-pronoun follows *-adh*, *-odh*, then *dh* = **ḍ**, e.g. (*do*) *chuireadh sé* **xir'əḍ ʃe:**, (*do*) *bhíodh sé* **v'i:ḍ ʃe:**.

(v) *-gh* > **f** in certain monosyllables and quasi-monosyllables, e.g. *ogh* **uf**, *tiugh* **t'uf**, *aniogh* **ə'ɴ'uf**. These are the forms that occur in pausa, and often preceding a vowel in a speech chain. When a consonant follows immediately in a speech chain, they usually assume the forms with **w**, becoming respectively **uw**, **t'uw**, and **ə'ɴ'uw**.

367. Following a consonant in non-monosyllables the ending *-(e)adh* > **u:**, e.g. *madadh* **madu:**, *briseadh* **br'iʃu:**.

Exceptions—(i) When an epithet with consonant initial is linked in close sequence with a noun ending in *-(e)adh*, the final *dh* regularly disappears, e.g. *madadh fireann* **madə f'ir'əɴ**, *madadh boineann* **madə bir'əɴ**. It would seem that it was from cases such as this that **ə** < *adh* arose in nouns and became general in the southern parts of Ireland. When the initial of the word closely following is a vowel, the ending *-(e)adh* gives **u:**, e.g. *madadh uisge* **madu: iʃg'**, which became general in a large part of the north of the country, including Erris. *-eadh* gives **ə** in *Cúigeadh Mumhan* **ku:g'ə 'mu:n**, and is elided in *Cúigeadh Uladh* **''ku:g' ə'lu:**.

(ii) *-adh* is lost in *gábhadh* **ga:w**, and in the vn. *sgríobhadh* **ʃgr'i:w**.

368. Final *gh* when palatal following a short stressed vowel is either **j** or, more frequently, becomes **ç**, or may be elided in certain sandhi positions. Thus *troigh* may be either **trej** or **treç** or in sandhi **tro**, e.g. *troigh na coise* **tro nə koʃə**. So, too, *sleigh* is either **ʃl'ej** or **ʃl'eç** according to environment. The forms in **ç** are the 'stronger' forms occurring in pausa.

369. Final unstressed *-igh* preceded by a consonant > **i:** generally, e.g. *imthigh* **im'i:**, *ráithe an gheimhridh* **ra:ç ən' jĩvr'i:**. Here also *gh* may be devoiced and the ending becomes **-iç**. This is frequently heard in pausa and when the word is uttered in isolation, e.g. *is doiligh* **əs del'iç**, *d'imthigh* **d'im'iç**, *ar an ngealaigh* **er' ə ŋ'aliç**. *-igh* in verbs > **ə** when a pronoun subject follows, e.g. *tiocfaidh mé* **t'ukə m'e:**, *d'imthigh tú* **d'im'ə tu:**. Only a few examples have been observed of *-igh* > **-ə** where a pronoun subject did not follow. These are *d'imthigh leis* **d'im'ə l'eʃ**, *d'imthigh leó* **d'im'ə l'o:f**, and *coinnigh uaim* **kiɴ'ə wum**. *-igh* > **-ə** in surnames and in placenames where the inflexion has no longer any functional value, e.g. *Ó Dálaigh* **a: da:lə**, *Ó Raghailligh* **a: ri:l'ə**, *Cill Alaidh* **k'il' alə**, *Cill Choinnigh* **k'il' xiɴ'ə**. But where the inflexion has functional value, as in the vs., *-igh* is pronounced **i:**, e.g. *a Mhaolfhábhailligh* **ə wla:wil'i:**, or in the np., e.g. *na Máilligh* **nə ma:l'i:**. *-igh* coalesces with a preceding **i:** (< *idh*) in *gaisgidhigh* **gaʃg'i:**.

370. In the 2nd p. plur. impv. *-idh* when preceded by *g* is regularly **i:**, e.g. *léigidh* **l'ig'i:**, *leagaidh* **l'agi:**. In denominative verbs (type *cruinnigh*) plosive *g* replaces fricative *gh* before the plur. impv. suffix, thus giving *cruinnigí*, *imigí*, etc. This termination *-igí* has become generalized in the plur. impv. of all verbs except those with radical ending in *g*, such as *léig*, *leag*. The plur. impv. of *táim* is *bígí* in which *-igí* seems to have been affixed to the sg. *bí* with elision of the short vowel *i*. *fágaibh* presented something of a problem here in the matter of its impv. forms. A plur. impv. form **fágaigí* was inadmissible as the system rejects a succession of *g*'s in the impv. The solution

found was to adopt the shortened *fág* as 2nd p. sg. impv. thus leaving the field clear for *fágaí* as 2nd p. plur. impv.

BH, MH

371. *bh* and *mh* have not entirely fallen together in so far as *mh* in stressed syllables retains its nasal quality as well as nasalizing an adjoining vowel. Furthermore non-palatal *mh* following short stressed *a, ea,* and sometimes *o,* remains a weakly fricative consonant, while *bh* in a similar position is vocalized. There is coalescence of two syllables into one with compensatory lengthening or diphthongization where intervocalic *bh* preceded by *a* or *ea* is vocalized.[1] In the case of *mh* in such a position no coalescence of syllables takes place and the preceding (nasalized) vowel remains short. The difference in development may be exemplified by the words *leabhar* **ʟ'əur** and *geamhar* **g'ãwər**.

372. Initially non-palatal *bh, mh* = **w**, e.g. *a bhó* **ə wo:**, *mhuing* **wiŋ'**. Initial palatal *bh, mh* = **v'**, e.g. *bhí* **v'i:**, *a mhic* **ə v'ĩk'**, *do mhéar* **də v'ẽ:r**.

373. (i) Final non-palatal *bh, mh,* in monosyllables following a long vowel or diphthong = **w**, e.g. *taobh* **ti:w** (sometimes **ti:**), *sliabh* **ʃʟ'iəw**, *lámh* **ʟã:w**, *riamh* **ə'r'ĩəw**.

(ii) Final non-palatal *bh* following a short vowel in a monosyllable is vocalized and combines with the preceding vowel to form a diphthong, e.g. *threabh* **hr'əu**, *lobh* **ləu**, *Sadhbh* **səu**.

(iii) Final non-palatal *mh* following a short stressed vowel = nasalized **w** with nasalization of the preceding short vowel also, e.g. *damh* **dãw**, *neamh* **ɴ'aw**.

(iv) Final non-palatal *bh* > **f** in *dubh* **duf** ; in certain contexts it is **w**, thus: **duw**.

374. Final palatal *bh, mh,* in a monosyllable = **v'**, e.g. *láimh*[2] **ʟã:v'**, *Róimh* **rõ:v'**, *sibh* **ʃiv'**, *neimh* **ɴ'iv'**, *cléibh* **kl'e:v'**. Exceptionally *raibh* unstressed in context is **ro/re/rə**, stressed **rəu**.

375. Medial palatal *bh, mh,* following a stressed vowel = **v'** normally, e.g. *deimhin* **d'ĩv'in'**, *aoibhinn* **i:v'iɴ'**, *saidhbhir* **sev'ir'**, *uaibhreach* **uəvr'əx**, *sléibhe* **ʃʟ'e:v'ə**, *cuimhnigh* **kĩvn'i:**. Exceptionally *mh* > *m* in *coimhéad* **k'im'e:d** and in an alternative pronunciation of *cuimhnigh* **kimr'i:**.

[1] But see 379n.

[2] *mh* > *m* frequently in the speech of MMt, e.g. *láimh* > *láim*.

376. Non-palatal medial *bh, mh,* following a long vowel or *ao* = **w**, e.g. *díomhaoin* **d'i:wi:n'**, *faobhar* **fi:wər**, *lámha*[1] **ʟã:wə**, *bríoghmhar* **br'i:wər**, *díoghbháil* **d'i:wa:l'**, *ághmhail* **a:wil'**.

Exception—*clúmhach* **klũ:x**.

377. Non-palatal medial *bh* following the diphthong *ia* in *fiabhras* joins with **ə**, the second element, to produce a new diphthong **əu**. The result is **f'iəurəs**, which is trisyllabic in structure. *diabhal* > *deabhal* **d'əul**.

378. Non-palatal medial *bh* following the diphthong *ua* in the word *uabhar* merges with the second element of this to form the diphthong **əu**. The initial *u* > **w**. The result is **wəuər**, which with some speakers at least is disyllabic.

379. Non-palatal medial *bh* following a stressed short vowel normally disappears with compensatory lengthening or diphthongization of the preceding vowel and coalescence of syllables as follows :—

(i) *a* >**əu**, e.g. *labhair*[2] **ʟəur'**, *gabhar*[2] **gəur**, *abhainn*[2] **əuɴ'** ; > **o:** exceptionally in *tabhair* **to:r'** also **tu:r'**, *gabháil* (' act of steering ') **go:l'**, *gabháil* (' yeast ') **go:l'**. Note *ag gabháil* (' going ') **ə gel'/gol'**, where the current forms show the influence of *dol*.

(ii) *ea* > **əu**, e.g. *seabhac* **ʃəuk**, *leabhar* **ʟ'əur**, *meabhair* **m'əur'**. Exceptionally > **u:** in the phrase *dá fheabhas* **a: wu:s**.

(iii) *io, iu,* > **u:**, e.g. *siobhal* **ʃu:l**, *tiobhraidh* **t'u:rhi:**. There is no coalescence where a long vowel follows, e.g. *Siobhán* **ʃu:a:n**.

(iv) *o* > **əu**, e.g. *gobha* **gəuə**, without coalescence of syllables.

(v) *u* > **u:**, e.g. *dubhairt* **du:rt'**, *ubhall* **u:ʟə**. There is no coalescence where a long vowel follows, e.g. *dubhán* **du:a:n**, *dubháilce* **du:a:lk'ə**.

380. Non-palatal medial *mh* following stressed *a, ea,* > nasalized **w** with nasalization of the preceding short vowel, e.g. *geamhar* **g'ãwər**, *sleamhain* **ʃʟ'ãwin'**, *gamhain* **gãwin'**, *samhaidh* **sãwi:**, *reamhar* **rãwər**, *leamhnacht* **ʟ'ãwnəxd**. Exceptionally > **o:** in *amhrán* **o:ra:n**, > **u:** in *dheamhan* **ju:n**, and in one pronunciation of the prepositional pronoun *damh-sa* **dũ:sə**, heard only in

[1] MMt *lámaí*; similarly his pronounciation of *crumha* 'maggots' is *crumaí*.

[2] These and such (originally) disyllabic words ending in *-r* or in palatal *-(n)n* following **əu** (< *abh* or *odh*) have concurrently two forms. In pausa they are regularly disyllabic ; in context they are usually monosyllabic.

verse. *mh* drops out of *amharc*, with coalescence of syllables but without consequent vowel lengthening or diphthongization, **aŋk**. Cf. *cumhang* > **kuŋ**, § 382.

381. Stressed *omh* > **õ:** normally, e.g. *comhairle* **kõ:rʟ'ə**, *comharsa* **kõ:rʃə**, *comhnaidhe* **ko:ni:**, *comhrag* **kõ:rək**, *Domhnall* **do:nəʟ**, *comhla* **kõ:li:/ko:nli:**, *comhra* **kõ:rə/ko:nrə**. Exceptionally *omh* > **o:** in *comhrádh* **ko:ra:** ; > **u:** in *comhluadar* **ku:lo:dər**; > **əu** in *domhan* **dəun** ; > **ãw** in *domhain* **dãwin'** ; > **õ** in *tomhas* **tõs**.

382. Stressed *umh* > **ũ:**, e.g. *cumhaidh* **kũ:i:/kũ:jə**, *dumhaigh* **dũ:i:/dũ:jə**, *umhlaigh* **ũ:li:**, *crumhóg* **krũ:o:g**, *Cúigeadh Mumhan* **ku:g'ə mu:n**. Exceptionally there is coalescence of syllables without vowel lengthening in *cumhang* **kuŋ**, and also in what seems to be a derivative of this, *cumhanglóg* **kuŋlo:g**. Cf. *amharc* **aŋk**, § 380.

383. In unstressed syllables *bh* and *mh* have fallen together. Non-palatal *bh/ mh* combines with a preceding short vowel, including an epenthetic vowel, to give **u:** with coalescence of syllables, e.g. *baramhail* **baru:l'**, *arbhar* **aru:r**, *madramhail* **madru:l'**, *cearrbhach* **k'aru:x**, *béalbhach* **b'e:lu:x**, *cosmhail* **kosu:l'**, *greannmhar* **gr'aɴu:r**, *leaṇmhain* **ʟ'anu:nt'**, *deichneabhar* **d'ihn'u:r**, *teinneas talmhan* **t'iɴ'əs talu:nə**, *gealbhann* **g'alu:n**, *marbhach* **maru:x**, *breitheamhnas* **br'ehu:nəs**, *lánamhain* **ʟa:nu:n'**.

384. When a long vowel follows, *bh/ mh* does not become vocalized, e.g. *marbhánach* **marəwa:nəx**, *searbhóntaidh* **ʃarəwo:nti:**. The fricative remains also in *easbhaidh* **aswi:**, (*airgead*) *deachmhaidh* **d'axwi:**. *bh* is lost without effect in *fágbhaim* **fa:gim'**, *tógbháil* **to:ga:l'**, *uireasbhaidh* **er'əsi:**, *mh* in *seachtmhain* **ʃaxdin'**, and (with syncope) in *Maolmhuire* > *Maolra* > *Maorla*.

385. Final non-palatal *bh* preceded by a liquid combines with epenthetic vowel to give **u:**, e.g. *balbh* **balu:**, *garbh* **garu:**, *banbh* **banu:**, *searbh* **ʃaru:**.

386. Final palatal *bh* preceded by a liquid remains a fricative, e.g. *a leinbh* **ə lin'iv'**, *bainbh* **ban'iv'**, *tairbh* **tar'iv'**.

387. The ending *-(e)amh* in an unstressed syllable has fallen together with *-(e)adh* > **u:**, e.g. *talamh* **talu:**, *caitheamh* **kahu:**, *gaineamh* **gan'u:**. Exceptionally > **ə** in *breitheamh* **br'ehə** ; > **i:** in *dadamh* **dadi:/tadi:**. The endings *-(e)adh, -mhadh* in ordinals >

hu: ; this has become generalized, e.g. **e:nhu:** , **tr'i:hu:**, **ʃe:hu:** ; it devoices *g* in *cúigeadh* **ku:k'u:**. When preceded by *t* in ordinals *mh* is lost, e.g. *seachtmhadh* **ʃaxdu:**.

388. The endings *-(a)ibh, -(a)imh* in an unstressed syllable > **i:**, e.g. *agaibh* **ogi:**, *oraibh* **ori:**, *dá ríribh* **da: 'r'i: r'i:**, *talaimh* **tali:**, *Gaillimh* **gaʟ'i:**. In Dú Chaocháin **-iv'** is heard in *Fianaibh Éireann*, used as npl., and in a *fhearaibh*, vpl.

389. *-mh-* has become vocalized in gs. *gainmhe*, e.g. **ʃruʃ gan'i:** *sruth gainmhe*, and in *ní áirmhim* **ɴ'i: a:r'i:m'**. *bh* remains in *tairbhe* **tar'iv'ə**, and *mh* in *Gaillimhe* **gaʟ'iv'ə**. Medial palatal *bh* preceded by epenthetic vowel regularly remains fricative **v'** but may become velar and vocalized, e.g. *An tInnbhear* **ə t'iɴ'iv'ər** (Faulmore generally) but **ə t'iɴ'u:r** always with Sb, *Deirbhile* **g'er'ivl'ə**, for which Sb said **g'er'u:l'ə**.

390. *-bh-* is lost without effect in *dearbh-bhráthair* **dr'içə:r'** and in *deirbh-shiúr* **d'er'hu:r/d'er'əhu:r**, but in the gpl. of the latter *bh* + *sh* > **f'**, e.g. *deichneabhar deirbh-sheathar* **d'ihn'u:r d'er'if'a:r**. *mh* is lost without effect in the proclitic *Mhac* in a surname, e.g. *Seaán Mhac Pháidín* **ʃa:n ək fa:d'i:n'**.

391. For *-bhth-, -mhth-* > **f** see § 401.

TH

392. *th* normally = **h** initially, medially, and finally, e.g. *thall* **ha:ʟ**, *thíos* **hi:s**, *ní thiobhraidh* **ɴ'i: hu:rhi:**, *tháinig* **han'ik'**, *máthair* **mã:hir'**, *áitheas* **a:həs**, *maitheas* **mahəs**, *reithe* **rehə**, *feitheamh* **f'ehu:**, *mithid* **m'ihid'**, *dath* **dah**, *rath* **rah**, *leath* **ʟ'ah**, *bheith* **v'eh**.

393. There are many exceptions to the rule that *th* = **h**. Initially *th* > **ç** in a *thighearna*. In intervocalic position and finally palatal *th* frequently > **ç**.

Examples—(intervocalic) : *ithe* **içə**, *ráithe* **ra:çə**, *cithe* < *cioth* **k'içə** ; (final) : *caith* **kaç**, *maith* **maç**, *ith* **iç**, *bith* **b'iç**, *bruith* **briç**, *sáith* **sa:ç**. The last six examples, it should be noted, are strong stressed forms. Shorter forms of these occur preceding a consonant in sandhi, e.g. *tabhair aire mhaith dó* **wã do:**, *níor mhaith liom iad* **ɴ'i:r wã l'um iəd**, *a sháith lé déanamh* **ə ha: l'e:**

d'i:nu:, *caith siar é* **ka ʃiər e:**, *a bhruith dóibh* **ə wru do:f**, *foghaint ar bith san mnaoi* **fo:nt' ə b'i sə mrĩ:**.

394. A definite verbal pattern has emerged with alternation between **ç**, nil, and **h** in the case of *caithim* and other similar monosyllabic stems. Thus the pres. is **kaçəɴ**, pret. active **xaç**, (with pronoun) **xa ʃe:**, pass. **kaçu:**, vn. **kahu:**. See further §§ 578 sq.

395. Non-palatal *th* is silent finally following a long vowel or diphthong, e.g. *úth, gaoth, liath, luath, bláth, tráth.*

396. Non-palatal intervocalic *th* is silent following stressed *á* with coalescence of syllables in *bláthanna* **bla:ɴi:**, *clog na dtráthann* **klog ɴə dra:ɴ**, *bláthach* **bla:x**, *sáthach* **sa:x**, and following unstressed *á* in *soláthar* **sola:r**. *th* is silent with coalescence of syllables in the surname *Mhac Thuathail* **ə kuəl'**.

397. Exceptionally medial *th* > **x** in *eathar* **axər** and final *th* in *go bráth* **gə bra:x**.

398. Following *u*, *th* > **f** in stressed syllables, e.g. *sruth* **ʃruf**, *srutháin* **ʃrufa:n**, *guth* **guf**, *bruth* **bruf**, *cruth* **kruf**, *cruthaigh* **krufi:** ; following unstressed **u:** in the placename *Ceathramha Thaidhg* **k'ahru: 'fəig'** ; and preceding unstressed **uə** in *athuair* **'afuər'**.

399. Following *r* at the end of a stressed syllable *th* > **ʃ** (as described in § 140) before **ə**, before **i:**, or before **u:**, in open final position, in Doohoma and also with some speakers in Dû Chaocháin.

Examples—*clártha* **kla:rʃi:**, *gearrtha* **g'a:rʃi:**, *bóithre*[1] **bo:rʃi:**, *ortha* **orʃu:** (all from AOS). This development of *th* > **ʃ** following *r* is very rare in Faulmore ; only one instance of it, i.e. *iarrtha* **iərʃ**, has been observed in the speech of Sb.

400. *th* disappears without effect following a voiceless consonant, e.g. *ceaptha* **k'api:**, *tuitthe* **t'it'i:**, *feicthe* **f'ek'i:**. *th* disappears in all parts of the verb *imthighim*, in *ceithre*, and in *parrthas.*

401. *th* devoices a voiced plosive or voiced fricative when it precedes it or follows it. Thus *b, d, g, bh, mh, gh* > *p, t, c, f, f, ch* respectively, e.g. *réabtha* > *réapaí, séidthe* > *séití, leagtha* > *leacaí, fágthar* > *fácar, gróigthear* > *gróicear, sgríobhtha* > *sgríofaí, treabhtha* > *triofaí, gabhtha* > *gofaí, lobhtha* > *lofaí, lúthmhar* > *lúfar, bláthmhar* > *bláfar, caoimhtheach* > *caoifeach* **kĩ:f'əx**, *leith-bhliadhain* > *leifliain.*

[1] By metathesis *bóirthe.*

402. Exceptionally *-bhth-* disappears with coalescence of syllables in *baintreabhthach* **bantr'əx**.

403. *-ghth-* > *-ch-*, e.g. *chruinneóghthá* **xriɴ'o:xa:**, *bhalóghthaoi* **walo:xi:** ; > **f** in *toghtha* **tofi:**, > **f'** in *tighthe* **t'if'i:**. The participial termination *-(a)ighthe* regularly gives **içə**. Within an utterance *-(a)ighthe* not infrequently > **i:**, but **içə** is also commonly used, e.g. *greamaighthe dhó* **gr'amiçə ɣo:**. In terminal position **içə** is regularly shortened to **iç**, e.g. **im'iç** *imthighthe*, **sda:liç** *stálaighthe. -thgh-* > **-f-** exceptionally in *lúth-gháir* **ʟufa:r'**.

404. Initially and medially *th* devoices a following liquid, e.g. *(do) throid* **hred'**, *raithneach* **rahn'əx**, *tráithnín* **tra:hn'i:n'**, *athlán* **ahla:n**, *aithrighe* **ahr'i:**. Following a long vowel *-thr-* tends by metathesis to become **-rh-**, e.g. *saothrughadh* **si:rhu:**, *tréathrach* **tr'e:rhəx**. Exceptionally *thr-* > **ʃ** in the speech of AOS (Doohoma), thus *threabhfadh* **ʃohu:**, *threibh* **ʃev'**.

F, PH

405. *f, ph* = **f, f'**, normally, e.g. *focal, fada, fionn, a Pheadair, aifreann, tafann.*

Exceptions—(i) Following a liquid, *f* > **h**, e.g. *fionnfadh* **f'iɴhu:**, *méanfadhach* **m'e:nhu:x**. Similarly throughout the inflexion of the fut. and cond., e.g. *cuirfidh* **kir'hi:**, *d'ólfá* **do:lha:**, *bhainfidhe* **wan'hi:**, *caillfidhear* **kaʟ'hi:r**. *-fr-* > **-rh-** by metathesis following a long vowel in *cófra* **ko:rhə**, and following a diphthong in *fiafraighe* **f'iərhi:**.

(ii) *f* disappears when preceded by a voiceless consonant, e.g. *béicfeadhach* **b'e:k'u:x**, *ceapfaidh* **k'api:**, *tuitfidh* **t'it'i:**, *loicfeadh* **lok'u:**. Exceptionally *f* remains in the borrowed word *bricfasta* **br'ik'fasdə**.

406. **h** < *f* devoices a preceding voiced plosive or voiced fricative in the same way as **h** < *th*, e.g. *chreidfeá* **çr'et'a:**, *léigfidhe* **l'ik'i:**, *siabfaidh* **ʃiəpi:**, *d'fhighfeadh* **d'içu:**. The terminations ***fu:** and ***çi:** are intolerable in the system and are replaced in the case of verbs by **-hu:** and **-hi:** respectively, e.g. *shnámhfadh* **hna:hu:**, *lighfidh* **ʟ'i:hi:**, *bháithfidhe* **wa:hi:**. Contrast **ʟ'içə ʃi:** *lighfidh sí*, **ba:çə ʃe:** *báithfidh sé*, with pronoun subject.

407. *f* > **h** in *féin* **he:n'** except in verse where **f'e:n'** is common. When a prepositional pronoun ending in *m* precedes, the form of this word is **p'e:n'**.

CH

408. *ch* = **x**, **ç** normally, e.g. *chaill, cochall, cloch, a cheist, dícheall, fiche, cloiche, croich.* Exceptions are few: *ch* > **h** in *chonnaic* **han'ik'**, *cheana* **hanə**, *chugad* ('beware') **hugəd**, *chugainn* ('next') **hugiɴ'**; following *oi, ei* in *droichead* **drehəd**, *deichneabhar* **d'ihn'u:r**. *ch* > *h* and devoices preceding *d* in *ceardcha* **k'a:rti:**.

409. *ch* is treated as if it were *gh* in *faitcheas*, thus *faitgheas* > *faitigheas* > *faitíos* **fat'i:s.**[1] Similarly *fairchín* > **far'i:n'**.

410. *ch* > *c* in the phrase *i n-airchis* **ə ɴar'ik'iʃ**, and commonly in *sochraide.*

411. *ch* > **f'** exceptionally in *cluiche, doicheall* **def'əʟ**, and > **f** in *chuaidh* **fuəj**.

412. Palatal *ch* is lost in monosyllables following *i*, e.g. *i gcrích Fódla* for which *na trí Fódla* is commonly substituted in verse. *ch* disappears without trace from the word *oidhche* in *Oidhche fhéil Muire* **i:l' mir'ə**, and similar phrases.

413. *-mch-* > *-mp-* in *thimcheall* and *iomchar.*

Note that *-ch-* is always velar in the cluster *-cht*, that is to say it does not become palatalized along with the *t* in, for example, *boicht, boichte.*

S

414. Non-palatal *s* = **s**, e.g. *saoghal, lasadh, cos.* Exceptionally > **ʃ** in *saoil* **ʃi:l'**, *soir* **ʃer'**, *soileastar* **sel'əsdər**/**ʃel'əsdər**.

415. *s* > **ʃ** in *Oidhche fhéil Sain Seaáin* **i:l' ʃin' ʃa:n'**.

416. Preceding and following *r, s* palatal and non-palatal fall together as **ʃ** (described § 140), e.g. *sráid* **ʃra:d'**, *sruth* **ʃruf**, *srian* **ʃriən**, *céirseach* **k'e:rʃəx**. Some speakers in Faulmore had **s** in such words as *sruth, srathar*, but Sb had **ʃ** in these.

417. Palatal *s* = **ʃ**, except initially before *m, p*, where *s* = **s**. Medially **ʃ** remains in *taisbéan* **ʃa:n**, with loss of *b*.

418. **s** replaces **ʃ** in sandhi in placenames beginning with *Inis* when the following word begins with a velar, e.g. *Inis Gluaire* **in'əs gluər'ə**, *Inis Tuirc* **in'əs tirk'**, *Inis Caorach* **in'əs ki:rəx**.

[1] Reduced to **fas**, when used as conjunction meaning 'lest'.

419. *s* > **h** usually in the words *sin* and *seo* occurring initially in an utterance, in giving directions, e.g. *hin é thall é, heo* (**həu**) *í do leitir*; in the conjunction *sul 'á* **hal a:**/**həl a:**; in Doohoma in the word *tuirseach* **torhəx** (generally **torʃəx**); in Faulmore with some in the word *fairsing* **farhiɴ'** (usually **farʃiɴ'**).

420. *s* > *r* by substitution of ending in the pret. pass. of the verb *táim*: (*do*) *bhitheas* **v'i:hər**.

SH

421. *sh* = **h** normally. Palatal *sh* > **ç** before a long back vowel, e.g. *faoi sheól* **fi: ço:l**, *gach uile sheórt* **xil'ə ço:rt** (Dú Chaocháin), *shiobhail siad* **çu:l' ʃi:d**. Note the development in **ça:n' ʃe:** beside **hə'ʃa:n' ʃe:** as pret. of *taisbéin*, for which see § 417.

H

422. *h* = **h**, initially as a grammatical prefix and in loanwords, e.g. *hata, halmadóir* **haləmədo:r'**. Exceptionally in the case of the latter word, when the definite article precedes, *t* is prefixed and replaces **h**, thus: **əɴ taləmədo:r'**.

FH

423. *fh* is silent. In the following, after the negative particle *ní*, **w** develops from a glide preceding *u*: *ní fhuair* **ɴ'i: wuər'**, *ní fhuighbhe* **ɴ'i: wi:ə**, *ní fhuasglaíonn* **ɴ'i: wuəsgli:ɴ**.

Nasal Consonants

M

424. *m* = **m, m'**. Exceptionally > **n** in *dochum* **ən, n**.

425. Frequently in the speech of Sb *m* > **w** in the words *seamair* **ʃãwir'**, *seamróg* **ʃãwro:g**. Initially *m* > **w** in *mhuing* ('mane') **wiŋ'**, in which the original initial has been forgotten.[1] *m* > **f** medially in the word *camall* **kã:fəʟ**.

[1] For the same phenomenon in Donegal cf. Quiggin, §§ 195, 303; Sommerfelt, Torr, § 156, and p. 193.

N

426. Unlenited *n* (i.e. *n* in absolute initial position, *nn*, or *n* following *s*, *r*) = **n**, **n′**, e.g. *natháin* **noha:n**, *annamh* **anu:**, *fireann* **f′ir′ən**, *snámh* **sna:w**, *eórna* **o:rnə**, *álainn* **a:lin′**, *sníomh* **ʃn′i:w**, *meisneach* **m′iʃn′əx**, *bairneach* **ba:rn′əx**.

427. Alveolar *n* only is employed medially before non-palatal *r*, *s*, e.g. *sgannradh* **sganru:**, *ag ionnsaighe* **g′insi:**. For non-palatal *n* + *r* > **nᵈr**, **nᵗr**, see §§ 204 sq. Before palatal *s*, *t*, in the same word, **n′** only is used, e.g. *teach bainse* **t′ax banʃ**, *cainnt* **kant′**.

428. *-n* of the definite article, of *aon*, and eclipsing *n-* before vowels > **n**, **n′**, e.g. *an ordóg* **ən ordo:g**, *aon ughdar* **a·n u:dər**, *naoi n-ordlaigh* **ni: norli:**, *an eangach* **ən′ aŋəx**, *aon eólas* **a·n′ o:ləs**, *naoi n-iomaire* **ni: n′umir′ə**.

429. Probably the most commonly elided consonant is *-n* of the singular definite article. Here in dealing with elision it is convenient to treat the provected *t* of the article prefixed to an initial vowel of a noun as if it were the initial consonant of such noun. Between consonants the *-n* of the singular article is regularly elided, e.g. *ar fud an bhaile* **ər fud ə wal′ə**, *bun an tsrutháin* **bun ə trufa:n′**, *tháinig an fathach* **han′ik′ ə fahəx**, *ag an gcruach* **eg′ ə gruəx**, *seólfa muid an t-asal* **ʃo:lhəmid′ ə tasəl**, *soill an mhuc* **seL′ ə wũk**, *cnáimh an droma* **krã:v′ ə drumə**, *dias an tseagail* **d′i:s ə t′agil′**, *ar an bhfasgadh* **er′ ə wasgu:**, *bóthar an Chairn* **bo:hər ə xa:rin′**, *is mór an lán é* **əs mo:r ə la:n e:**.

430. Preceded by a vowel and followed by a consonant the *-n* of the article is retained, e.g. *tá an crúb sgoilte* **ta: n kru:b sgelt′i:**, *bainne an róin* **ban′ə n ro:n′**, *togha an talaimh* **təu ən tali:**, *togha an lín* **təu ən′ l′i:n′**, *thóg sí an rása* **ho:g′ ʃi: n ra:s**, *dhúisigh an gadaighe* **ɣu:ʃi: n gadi:**, *ní chreidfeadh an sagart í* **n′i: çr′et′u: n sagərt i:**, *i ndeireadh an lae* **ə n′er′u: n le:**.

431. When a consonant precedes and a vowel (or *fh* or *fhr* + vowel) follows the article, there is no elision, e.g. *éadan an fhir* **e:dən ən′ ir′**, *as an uisge* **as ən iʃg′**, *barr an fhraoigh* **ba:r ən ri:**.

432. When the article occurs as the first word in an utterance, the *-n* may or may not be elided before a consonant. It is often retained especially before *d*, *t*, *l*.

Examples—*An Tearmann* **ə t′arəmən**, *an cam is an díreach* **ə kam sə d′i:r′əx**, *An tOiléan Úr* **ən′ t′il′a:n u:r**, *an t-oideas* **ən′ t′ed′əs**, *An tÁis* **ən′ t′a:ʃ**.

433. The *n-* of the gen. sg. *na* is assimilated to a preceding **L** in *capall na deagh-lárach* **kapəL ə d′a:la:rəx** (Sb), and in the placename *Poll na Seantuine* **poL ə ʃantin′ə**.

434. Frequently preceding a fricative or *r* the closure for the *n* is not completed in *aon*, *sean-*, *bean-*, *an-*, *ion-*. In such cases of elision the vowel preceding the *n* retains very perceptible nasalization.

Examples—**gã xoʃg′e:m′ ə′wa:n′** *d′aon choisgéim amháin*, **ʃã-xoli:** *sean-chulaidh*, **b′ãforta:n** *bean-phortán*, **ãsosdəx** *an-sostach*, **ə′want′i:** *ion-bhainte*, **ə′woLti:** *ion-mholta*. *n* is invariably elided in **k′ẽ: xi:** *cia an chaoi*, **ʃẽ: xi:** *is é an chaoi*. For *méanra* Sb had two pronunciations, viz. **m′e:nrə** and **m′ẽ:rə**. Likewise for *ínfairt* both **u:nfərt′** and **ũ:fərt′** are current in Faulmore.

435. *n* = **d′** in *níos*, e.g. **d′i:s mu:** *níos mó*. In Faulmore *nn* > **ḍ** usually in the words *annseo* **əḍ′ʃəu**, *annsin* **əḍ′ʃin′**.

436. Lenited *n* = **n**, **n′**, e.g. *gach uile Nodlaig* **xil′ə noLik′**, *anam* **anəm**, *bán* **ba:n**, *mo neart* **mə n′art**, *faoi neasacht* **fi: n′isəxd**, *caoineadh* **ki:n′u:**, *min* **m′in′**. Exceptionally *n* > **n′** in *fearthain* **f′arhin′**.

437. *n* > **nh** in the word *tanaidhe* **tanhi:**.

438. *n* preceded by **v′** > **n′** in many words, e.g. *aibhne* **evn′ə**, *aoibhneas* **i:vn′əs**, *doimhneacht* **dãvn′əxd**, *goibhne* **gevn′ə**, *sgríbhneóireacht* **ʃgr′i:vn′o:r′əxd** ; similarly in the borrowed word **ʃevn′e:ri:** *siúinéir*.

439. Medially intervocalic *n*(*n*) is sometimes replaced by **r** (or **rh**) or **r′**, e.g. *punnann* **purən/purhən**, *muna* **mur(ə)**, *boineann* **bir′ən**.

440. In the clusters *cn*, *gn*, *tn*, *mn*, *mhn*, *n* is regularly replaced by a more or less nasalized *r*.[1]

Examples—*cnoc* **krũk**, *cnota* **krũtə**, *gnás* **grã:s**, *an tsnáthad mhór* **ə trã:həd wõ:r**, *Alt an tSneachta* **aLt ə tr′ãxd**, *mná* **mrã:**,

[1] In Doohoma *n* > *r* with elision of the preceding syllable in the case of the surnames *Ó Connmhacháin* **a: krũ:xa:n′**, *Ó Manacháin* **a: mrũxa:n′**, *Ó Maonghaile* **a: mrĩ:l′ə**. In Faulmore I have heard **a: 'kunu:xa:n′** , **a: munəxa:n′/a: murəxa:n′** , and (for the fem.) **n′i: wi'n′i:l′ə**.

Luimneach **lɪmr'əx/lɪmn'əx**, *chuimhnigh* **xɪvr'i:/xɪmr'i:/xɪvn'i:**, *macnas* **makrəs**. But note the retention of *n* in such words as *géimneach, léimneach, craicne, imneadh* (§ 168), and *doimhneacht* (§ 172).

441. *n* is frequently devoiced in *muinéal* **mɪn'e:l/mɪhn'e:l/miçe:l**. *n* is lost in *inchinn* **içɪn'**, *muinchille* **miçɪl'ə**. *n* is assimilated to preceding *l* in *muilneóir* **mɪl'o:r'** and to following *l* in *áinleóg* **a:l'o:g**, *comán mionla* **kuma:n m'ulə**. *n* remains unassimilated in *mínleach* **m'i:nl'əx**.

442. In Dú Chaocháin, but not in Faulmore, there is a tendency to replace medial **n'** by **ɴ'**. The following examples are from SOG : *éinín* **e:ɴ'i:n'**, *gaineamh* **gaɴ'u:**, *leath-ghloine* **l'aɣlaɴ'ə**, *falach mine* **faləx m'ɪɴ'u:**, *cnámha mín-uaisle* **m'i:ɴ'uəʃl'ə**, *sean-duine* **ʃaɴɪɴ'ə**.

443. In final position in an unstressed syllable, while the distinction between palatal **ɴ'** and **n'** is rigidly observed and always clear to the ear, there seems to be under-differentiation of non-palatal **ɴ** and **n**. It is not easy to distinguish between them in such examples as *bruithean, torann*. There is perhaps a tendency to generalize **ɴ** in such position. See § 179n.

NG

444. *ng* = **ŋ, ŋ'**.

Exceptions—(1) Palatal *ng* when it occurs in word-final position in an unstressed syllable > **ɴ'**, e.g. *fairsing* **farʃɪɴ'**, *tarraing* **tarɪɴ'**, *sgilling* **ʃg'il'ɪɴ'**.

(ii) In medial position palatal *ng* > **ɴ'** usually in *cuingir* **kɪɴ'ir'**, in *doghraingeach* **do:rɪɴ'əx**, and when preceded by *r*, e.g. *tairnge* **ta:rɴ'ə**.

(iii) *ng* > **g** in *tarrngaireacht* **tarəgir'əxd**.

(iv) Palatal *ng* occurring initially in cases of eclipsis frequently > **ɴ'**, e.g. *i ngéibheann* **ə ɴ'e:v'əɴ**, *ar bharr na ngiosadán* **er' wa:r nə ɴ'isda:n** (Sb), *súgh na ngéadha* **su: nə ɴ'e:wə** (Lb).

(v) *ngn* > **n** with compensatory lengthening of preceding vowel in *congnamh* **ku:nu:** gen. **ku:ntə**, *iongnadh* **i:nu:**. Cf. also *peinginn* **p'i:ɴ'**, plur. **p'i:ɴ'əxi:**.

(vi) In *congaibh ng* has become palatalized and replaced by **ɴ'**, thus *cuingibh* > *cuinnibh* **kɪɴ'i:**. Similarly in the verbal nouns *fulang* and *tarrang, ng* has become palatalized and > *nn* to which *t* has been added, giving **fel'int'**, **tarɪnt'**.

Lateral Consonants

445. Unlenited *l* (i.e. *l* in absolute initial position, *ll*, or *l* following *r, s*) = **l, l'**, e.g. *lasgadh* **lasgu:**, *ballach* **baləx**, *mullach* **muləx**, *iall* **iəl**, *Gall* **gal**, *Béarla* **b'e:rlə**, *slat* **slat**, *leanabh* **l'anu:**, *duilleabhar* **d'il'u:r**, *buille* **bɪl'ə**, *cill* **k'il'**, *comhairle* **kõ:rl'ə**, *sleamhain* **ʃl'ãwɪn'**, *ísleán* **i:ʃl'a:n**. Exceptionally *ll* > **l'** in *sgilling* **ʃg'il'ɪn'**.

446. **l** (not **l**) is used in medial position before non-palatal *s*, e.g. *fallsa* **falsə**. **l'** (not **l'**) occurs before palatal *s* and palatal *t*, e.g. *aillse* **alʃ**, *caillte* **kalt'i:**.

447. Lenited *l* = **l, l'**, e.g. *do lorgain* **də lorəgɪn'**, (*do*) *lag an lá* **lag ə la:**, *bólacht* **bo:ləxd**, *ál* **a:l**, *aol* **i:l**, *mo léan* **mə l'e:n**, *do léine* **də l'e:n'i:**, *coileach* **kol'əx/kel'əx**, *feóil* **f'o:l'**.

448. Final non-palatal *l* and *ll* do not seem always to be clearly differentiated.[1] See 179n.

449. The preposition *lé* and all its pronominal derivatives have lenited *l*, viz. **l'e:**, **l'um**, **l'at**, etc.

Vowels in Position before Laterals

450. *a* > **a:** before *ll* in a few words, viz. *thall* **ha:l**, *anall* **ə'na:l**, *ar ball* **ər ba:l**.

Vibrant Consonants

451. Lenited *r* = **r, r'**, e.g. *Árainn* **a:rɪn'**, *cubhar* **ku:r**, *iasgaire* **iəsgir'ə**, *máthair* **ma:hir'**, *obair* **obir'**, *uair* **uər'**.

452. Initially palatal *r* has fallen together with non-palatal *r* as **r**. **r'** occurs for earlier initial *r* in the phrases *dá ríribh* **da:'r'i:r'i:**; *a-rís* **ə'r'i:ʃd'**, and in the word *riamh* which has become *a-riamh* **ə'r'ĩəw**.

453. In medial and final position unlenited *r* (generally written *rr*) both non-palatal and palatal > **r**, e.g. *searrach* **ʃarəx**, *barr* **ba:r**, *fairrge* **farig'ə**.

[1] Cf. de Búrca, The Irish of Tourmakeady, § 212.

454. *r* > **l'** in *feirm* **f'el'im'**, and its derivatives : *feirmeóir* **f'el'im'e:ri:**, and in *oireamhain* **f'el'u:nt'** ; > **l'**, but more usually **ʟ'**, in *do réir* **l'e:r'/ʟ'e:r'**. Following **ʃ**, *r* > **ʟ'** in *pisreóga* **p'iʃʟ'o:gi:**, and in one pronunciation of *caisearbhán* **kaʃʟ'əwa:n**. *r* > **n'** in *mairtíreacht* **mart'i:n'əxd**.

455. In intervocalic position, and especially following a long vowel or diphthong, there is a strong tendency to replace **r** by **rh** as in the following examples : *caorán, cióróg, méaróg, sméaróid, tiarach, cumhra*[1], *aireamhail, anuraidh*.

456. The possessive adjectives of the 1st and 2nd persons plur. have fallen together with that of the 3rd person *a* **ə**. *r* is often omitted in proclitics such as *ar, dár, gur, níor*, e.g. *ar feadh* **ə f'a**, *aird ar bith'* **a:rd' ə b'iç**, *an t-earrach dár gcionn* **ən' t'arəx a: g'uɴ**, *gurb in é an t-adhbhar* **gə b'in' e: ɴ ta:wər**, *níor mhaith liom* **ɴ'i: wã l'um**. The word *ar* is omitted at the start of the phrase *ar chor ar bith* **xor ə b'iç**. *r* is usually omitted in the conjunctional phrase *ó tharla* (' since ') **ha:ʟi:/ha:li:**. *r* is lost by haplology in *ceathrar* **k'ahər**.

457. In the speech of AOS initial palatal *thr* > **ʃ**, e.g. *de threibh* **gə ʃev'**, and **r'** was omitted by him following **d'**, **t'**, e.g. *dríúcht* (< *drúcht*) **d'u:xdə**, *tréith-lag* **t'e:lag**. For palatal *r* > **ʃ** preceding *c*, in Dú Chaocháin, see § 192n.

Vowels in Position before Vibrants

458. Short stressed *a, ai, ea* are lengthened before *rr*—when a vowel does not immediately follow—and also before *rd, rl, rn, rng*, e.g. *barr* **ba:r**, *tarr-ghad* **ta:rɣad**, *garrdha* **ga:ri:/gari:**, *parrthas* **pa:rəs**, *fearr* **f'a:r**, *gearr* **g'a:r**, *bearrtha* **b'a:rhi:**, *ard* **a:rd**, *aird* **a:rd'**, *i n-airde* **ə ɴa:rd'ə**, *cairde* **ka:rd'ə**, *ceardaighe* **k'a:rdi:**, *ceardcha* **k'a:rti:**, *tharla* **ha:ʟi:**, *bearna* **b'a:ɴi:**, *ní dhearna* **ɴ'i: ja:ɴi:**, *Port an Chairn* **port ə xa:riɴ'**, *tairnge* **ta:ɴ'ə**.

oi > **o:** in *n-oirthear* **no:rhi:** in the phr. *an laithe iar n-a n-oirthear*.

[1] An alternative pronunciation is **kũ:rʃə** (AOS).

Chapter XVI

Interchange of Consonants

Palatals and Non-Palatals

459. Non-palatal > palatal

(i) Initially : *clú* > *cliú, coimhéad* > *ciméad, croga* > *crioga, drúcht* > *dríúchta, duilleabhar* > *dilliúr, duilleóg* > *dilleóg, duileasg* > *dileasg, faicim* > *feicim, foghlaim* > *feólaim, saoilim* > *sílim, soir* > *seir, toidheacht* > *tíocht, tórann* > *teórainn, tuigim* > *tigim, tuilleadh* > *tilleadh, tuitim* > *titim*.

(ii) Medially : *abaidh* > *aipidh, comailt* > *coimilt* (Faulmore), *congaibh* > *cuingibh* > *cuinnibh, cumhain* > *cuimhin, mothaighim* > *moithighim* (but vn. is *mothú*), *tarbha* > *tairbhe, tosach* > *toiseach* (but non-palatal *s* remains in *cos tosaigh*).[1]

(iii) Finally : *ag* > *eig* (for *ag* preceding a vn. see §§ 461 sq.), *ar* > *eir, cur* > *cuir* beside *cur, thógaibh* > *thóig* (but non-palatal *g* remains in vn. *tógáil*).

460. Palatal > non-palatal

(i) Initially : *bídeach* > *buídeach, píopa* > *puíopa, píobán* > *puíobán, píoblach* > *puíoblach, teastáil* > *tastáil, tiomáin* > *tumáin, tré* > *thruí, thríd* > *thruíd, de* merges with *do* > *go, díom* > *duíom* or *dhuíom*.

(ii) Medially : *caoicdhighis* > *cocais, uirthe* > *orthaí, uiread* > *orad, -se* (emphatic suffix of the 1st and 2nd p. sg.) > *-sa*, e.g. *cuirim-se* > *cuirim-sa*.

(iii) Finally : In verbal nouns, when a palatal consonant precedes, the ending *-eáil* > *-eál*, e.g. *feiceáil* > *feiceál, congbháil* > *coinneál*. Palatal *m* > **m** in *uaim* **wum**.

461. Immediately preceding a vowel initial in a stressed word, final *-n* or provected *t-* of the singular article, *-n* of the interrogative verbal particle, *-n* of the numeral *aon*, eclipsing *n-*, the possessive *d'*, the verbal particle *d'* (< *do*), *-r* in a verbal particle,

[1] Non-palatal *n* > **n'** in *anois* and *fiadhnaise*. Cf. de Bhaldraithe, The Irish of Cois Fhairrge, § 619.

and *-g* of the preposition *ag* occurring before a vn., are palatal in quality when such initial is a front vowel, or a back vowel that has developed from what was historically a front vowel.

Examples—*an easóg* **əN' aso:g**, *an eórna* **əN' o:rNə**, *an t-earrach* **əN' t'arəx**, *an t-eólas* **əN' t'o:ləs**, *an imthigheann ?* **əN' im'i:N**, *aon fhear* **e:N' ar**, *i nÉirinn* **əN' e:r'iN'**, *Meall na nEach* **m'aL Nə N'ax**, *lé n-ithe* **l'e: n'iç**, *d'éadan* **d'e:dən**, *do d'iomchar* **gə d'umpər**, *d'imthigh* **d'im'i:**, *nior éirigh* **N'i:r' e:r'i:**, *ag iomchar* **əg' umpər**, *ag iomramh* **əg' umru:**. Exceptionally the possessive *m'* retains its velar quality before front vowels, e.g. *m'intinn* **mint'iN'**, *m'éisteacht* **me:ʃd'əxd**, *m'fhearacht-sa* **marəxdsə**.

462. The consonant (i.e. a consonant of the category mentioned in previous section) has velar quality when the initial of the following word is a back vowel or a vowel that has developed from an original back vowel.

Examples—*an oidhche* **əN i:çə**, *an t-airgead* **ə tar'ig'əd**, *an ólann ?* **əN o:ləN**, *aon uair amháin* **a·N uər' ə'wa:n'**, *lé n-ól* **l'e: no:l**, *d'athair* **dahir'**, *d'fhágaibh* **da:gi:**, *ar ól ?* **ər o:l**, *ag obair* **əg obir'**.

463. Before some words in which the initial front vowel has developed from an original back vowel, the final consonant of the preceding word is palatal, e.g. *an t-oiléan* **əN' t'il'a:n**, *an t-angcaire* **əN' t'aŋkir'ə**, *aon oideas* **a·N' ed'əs**; cf. *aon fhoghlaim* **e:N' o:lim'**.

464. There is some uncertainty about the quality of the final consonant when followed by initial *ea-*, *a-*. The preceding consonant is non-palatal in quality in *an eala* **əN alə**, *ag eagnaidheacht* **əg agni:xd**, but is palatal in *an eag* **əN' ag**.

Other Consonant Changes

Initial

465. *b* > *p* : *bronnaim* > *pronnaim*, *bangc* > *pangc* ; *b* > *m* : *beach* > *meach* ; *c* > *g* : *cabáiste* > *gubáiste* ; *d* > *t* : *dadamh* > *dadaidh/tadaidh* ; *f* > *p* : *fillim* > *pillim* ; *p* > *f* : *prop* > *frapa* ; *t* > *c* : *an té* > *an cé*. Prosthetic *f* is established in *fadódh* **fado:**, *fainic*, *fáinne*, *fan*, *fás*, *fathach*, *feiliúint* < *oireamhain*, *feithide* < *eathaid*, *fosgailt*, *fuacht*, *fuar*, *furasta*. Prosthetic *g* occurs in *Giúdaighe* < *Iúdaighe*. Prosthetic *t* appears in *áis* > **t'a:ʃ**, *iompódh* > *tiompódh*, *obann* > *tobann*, *aos óg* > *taos óg*. *f* > *t* in *fuaim* > *tuaim* ; *d* > *g* in *Deirbhile* > *Geirbhile* ; *t* sometimes > *s* in *tarathar* > *sarathar* **srahər** (MCd).

Final

466. *t* has been added finally to a number of words, following palatal *l*, *n*, *nn* (< *ng*), and *s*.

Examples—*creistint* < *creidsin*, *eicín/eicínt* < *éigin*, *fanúint*, *feisgint*, *feiliúint*, *fóint*, *foilinnt* < *fulang*, *leanúint*, *tarrainnt*, *tionnsgaint*, *tréisgint* < *tréigsin*, *tisgint* < *tuigsin*, *fáil/fáilt*, *arist*, *sgíst*, and in the 1st p. plur. ending of the secondary tenses, *-amaist*.

ag rádh has two current forms, viz. **ə ra:** and **ə ra:t'**, the latter showing influence of the participle *ráite*. *d* has been added to *i ngan-fhios* > *i ngan-fhiosd*.

Dissimilation

467. The following examples of dissimilation have been observed : (i) *l*——*l* > *r*——*l* in *Síol nDálaigh* **ʃi:r Na:lə** (Sb).

(ii) *nn*——*n* > *nn*——*r* in *inneóin* **iN'o:r'** (SOG).

(iii) *n*——*nn* > *n*——*r* in *Manannán na fairrge* **manəra:N Nə farig'u:** (SOG).

(iv) ——*r r*—— > ——*l r*—— in *An Mhuir Ruadh* **ə wũl ruə** (Sb).

(v) *n*——*nn*, and *nn*——*nn* > *r*——*nn* in Faulmore and in Dû Chaocháin generally, in *boineann* **bir'əN** and *punnann* **purəN/ purhəN**.

Chapter XVII

METATHESIS[1]

468. Palatal *ds* > *sd*, e.g. *creidsin* > **krʼeʃdʼintʼ**.

469. Palatal *gs* > *sg*, e.g. *faigsin* > *feisgint*, *tuigsin* > *tisgint*, *tréigsin* > *tréisgint*.

470. Palatal *ls* > **ʃʟʼ** in *dísle*, comparative of *dílis*, and also abstract noun.

471. In stressed syllables *n*, *l*, *r*, following a short vowel tends to be metathesized e.g. *Conchubhar* > *Cnochúr* > *Crochúr*, *bolgam* > *blogam*, *teilgean* > *tligean*, *earball* > *urball* > *ruball*, *tarathar* > *trathar*, *tarsna* > *trasna*, *tiormughadh* > *triomú*, *dearbh-bhráthair* > *dricheáir*. Similarly in an unstressed second syllable, e.g. *conairt* > **kunhridʼ**, *malairt* > **malhridʼ**, *caisearbhán* > *caisreabhán* > **kaʃʟʼəwaːn**.

472. *-lar* in the unstressed syllable of certain disyllables > *lra* > *rla*, viz. *biolar* **bʼirʟə**, *galar* > **garʟə**, *iolar* > **urʟə**. Similarly *lr* > *rl* in *deallradh* **dʼarʟuː** and in *Maolmhuire* **miːrʟə**.

473. *thr* > **rh** following a long stressed vowel or diphthong, e.g. *briathra* **brʼiərhiː**, *saothrughadh* **siːrhuː**, *tréathrach* **trʼeːrhəx**. Similarly *fr* > **rh** in *cófra* **koːrhə**, *fiafraighe* **fʼiərhiː**.

474. The cluster *rth* is broken into **h——r** in *carthannach* **kahərnəx**, and in *comhartha* **kõhəruː**.

475. *c——m* > *m——c* while *r* drops out in *coisricim* (*coisreacaim*) in the formula, common in tales, **gerʼimʼ əs kaʃimʼikʼ huː** *goirim is coisricim thú*. Note *r* seems to be dropped throughout the different parts of this verb, e.g. **gə gaʃgʼər huː** *go gcoisricthear thú*, **iʃgʼə kaʃgʼ** *uisge coisreacdha* (Sb).

476. **ʃr** frequently, and **rʃr** sometimes, replaces **rʃ** in the phrase *ar siobhal* **əʃ ruːl/ərʃ ruːl**.

477. *luiprín* seems to represent *luirpín* < *luchairpín* replacing *lucharpán*.

478. In *deargnait*, *d ea-r gn ait* > *r-ea nc* > **drʼaŋkidʼ**.

[1] For theory see Grammont's interesting chapter—La Métathèse—in his Traité de Phonétique.

479. Frequently in Faulmore *l——n* < *n——l* in the word *cinéal* **kʼulaːn** beside **kʼinʼaːl**.

480. Sb sporadically had **xr** < **rx** in the word *gearr-chaile* **gʼaːxralʼə**.

481. *r* preceding *o*, in a syllable that does not carry the chief stress, is metathesized in two phrases, viz. *Domhnach Chrom Dubh* **doːnəx xorəm duf**, *an chroch chéasta* **ə xorə çeːsdə**. Moreover, what amounts to an epenthetic vowel develops between *r* and *m* in the first case, between *r* and *ch* in the second.[1]

[1] An interesting example of metathesis is *paraffin* (> **pʼarəfʼiːnʼ** > **fʼarəpʼiːnʼ**) > **fʼarəbʼiːnʼ**

GRAMMATICAL SUPPLEMENT

CHAPTER XVIII

482. The additional matter appended in these chapters is intended to give the reader an outline of the more salient features of the accidence and morphology of the dialect. The supplement sets out the general rules governing initial mutation, gives the principal declensional patterns, illustrates usage with numerals, treats of pronouns and gives the full series of pronominal prepositions, and finally presents in considerable detail the verb paradigms.

INITIAL MUTATION

483. Initial mutation in words has morphemic function and its occurrence is determined by grammatical context. There are two forms of initial mutation of consonants, namely (i) lenition, and (ii) eclipsis. Lenition of an initial consonant in effect means that in certain grammatical situations a consonant, if a plosive, is replaced by the corresponding fricative, if a fricative, by a less constrictive fricative or by zero. If such initial consonant is a nasal, a less vigorously articulated nasal (in the case of **ɴ**, **ɴ′**) or a nasal fricative (in the case of **m**, **m′**) takes its place. **ʟ**, **ʟ′** have **l**, **l′** respectively as their lenited counterparts.

484. In eclipsis a voiced consonant gives place to the corresponding nasal, and an unvoiced consonant is replaced by the corresponding voiced consonant. Nasals, laterals, and vibrants are unaffected by eclipsis.

485. The following table shows (i) basic consonants, (ii) the consonants that replace them in situations where lenition comes into operation, and (iii) the consonants that take their place in eclipsis.

(i) basic consonant	(ii) lenited form	(iii) eclipsed form
b b′	**w v′**	**m m′**
p p′	**f f′**	**b b′**
d d′	**ɣ j**	**ɴ ɴ′**
t t′	**h h/ç**	**d d′**
g g′	**ɣ j**	**ŋ ŋ′**
k k′	**x ç**	**g g′**
f f′	zero	**w v′**
s ʃ	**h h/ç** [1]	**s ʃ**
m m′	**w v′**	**m m′**
ɴ ɴ′	**n n′**	**ɴ ɴ′**
ʟ ʟ′	**l l′**	**ʟ ʟ′**
sʟ	**hl**	**sʟ**
ʃʟ′	**hl′**	**ʃʟ′**
sɴ	**hn**	**sɴ**
ʃɴ′	**hn′**	**ʃɴ′**
ʃr	**hr**	**ʃr**
tr	**hr**	**dr**
tr′	**hr′**	**dr′**

Initial **h** is not subject to either lenition or eclipsis, neither are **s**, **ʃ** preceding **b**, **b′**; **d**, **d′**; **g**, **g′**; **m**, **m′**. **ḍ**, **ṭ** are only very slightly affected by either lenition or eclipsis.

LENITION

Lenition of Nouns

486. The initial consonant of a noun is lenited in the following situations :

(i) following the vocative particle **ə** *a*, e.g. **ə ɣin′ə çr′ãsd** *a dhuine chneasta*, **ə v′an xo:r′** *a bhean chóir*.

(ii) following the possessives **mə** *mo*, **də** *do*, **ə** *a* 'his', e.g. **mə hax** *mo theach*, **də xos** *do chos*, **ə wo:** *a bhó*.

(iii) following the prepositions **er′** *ar*, **gə** *de/do*, **fi:** *faoi*, **mər** *mar*, **a:** *ó*, **rĩv′** *roimh*, **hri:** *tré*. Non-lenition is the practice following **er′** in many phrases, mostly of an adverbial nature, such as *ar ball, ar cuairt, ar deireadh, ar feadh, ar fud, ar gor, ar*

[1] **t t′** following the article.

leithead, ar maidin, ar meisge, ar siobhal. **gən** *gan* usually lenites **m m′**, **b b′**, and sometimes **k k′**, **g g′**, e.g. **gən weʟ′** *gan mhoill*, **gən wãç** *gan mhaith*, but **gən ma nа: mi:n′ uɴ** *gan maith nâ maoin ann.* When *gan* is used with negative force, as in indirect commands, it does not lenite. **ed′ir′** *idir . . .* **əgəs** (**əs**) *agus*, when referring to a location do not lenite, but when the meaning is ' both . . . and ', lenition is the rule, e.g. **ed′ir′ çaɴ əs xos** *idir cheann is chos* ' unthreshed '. Following **har′** *thar* lenition occurs in certain cases, e.g. **har′ ɣin′ə b′iç el′ə** *thar dhuine ar bith oile.* Lenition follows **l′e:** *lé* in the phrase **l′e: çe:l′i:** *lé chéile*, and in a few verbal nouns, e.g. **l′e: ɣel′** *lé dhol*, **l′e: hi:xd** *lé thoidheacht* (POR).

(iv) following the article in the gen. sg. masc., e.g. **ba:r ə wal′ə** *barr an bhaile*, and in the nom. (and acc.) sg. fem., e.g. **kaʟ′u: n wã:hir′** *cailleadh an mháthair.* In the case of nouns having **s ʃ** for initial, **s ʃ** is replaced by **t t′**, the result of a process of lenition, e.g. **t′ax ə tagərt′** *teach an tsagairt*, **ə tu:l′** *an tsúil.* **d d′**, **ʟ ʟ′**, **ɴ ɴ′**, **t t′** are not lenited by the article.

(v) following **gən** *den/don*,[1] e.g. **gən wã:ʃd′ir′** *don mhaighistir*, **gəɴ tu:l′** *den tsúil.*

(vi) following any simple preposition + the singular article in the case of nouns having **s ʃ** for initial, e.g. **er′ ə ti:l** *ar an tsaoghal*, **eg′ ə t′anar** *ag an tsean-fhear*, **sə t′up** *san tsiopa.*

(vii) following a verbal noun, e.g. **ə fa:l′ wa:ʃ** *ag faghâil bháis.* This is the exception rather than the rule ; cf. **ə bant′ f′e:r′** *ag baint féir.*

(viii) when it is the second element of a compound noun, e.g. **fuəra:lt′ə** *fuar-fháilte*, **droxl′i:w** *droch-dhligheadh.*

(ix) if it is a proper noun in the gen., e.g. **t′ax wã:r′ə** *teach Mháire*, **tobər xim′i:n′** *tobar Choimín.*

(x) if it is a defining gen. following the nom. sg. of a fem. noun, e.g. **bo: waɴ′ə** *bó bhainne*, **bo: wõxiʃ** *bó mhochais*, **kruəx wu:nu:** *cruach mhónadh*, **i:çə ɣo:ni:** *oidhche Dhomhnaigh*, **b′an ɣlu:n** *bean ghlún*, **sʟat wãrə** *slat mhara* ; or following the nom. pl., ending in a palatal consonant, e.g. **kat′ wãrə** *cait mhara.*

(xi) when it is the first word of a phrase (incorporating a gen.) which is in gen. relation to a preceding noun, e.g. **er′ xu:l hax ə fobil′** *ar chúl theach an phobail*, **ə kriɴ′u: ar′ig′əd hax pobil′** *ag cruinniughadh airgead theach pobail.*

(xii) following the numerals **e:n** *aon* and **ə ce:d** *an chéad* (**d d′**, **ʟ ʟ′**, **ɴ ɴ′**, **t t′** excepted), e.g. **e:n wãç** *aon mhaith*, **ə çe:d çaɴ** *an chéad cheann* ; **ɣa:** *d(h)á* (except when preceded by the 3rd p. sg. fem. or plur. possessive), e.g. **ɣa: hu:l′** *dhá shúil* ; following **tr′i:** *trí*, **k′er′ə** *ceithre*, **ku:g′** *cúig*, **ʃe:** *sé*, when the sg. form of the noun is used, e.g. **tr′i: v′i:l′ə** *trí mhíle* (see § 554); following *uile*, e.g. **xil′ə f′i:ɴ′** *gach uile pheinginn.*

(xiii) in surnames following *Ní, Nic*, and *Uí*, e.g. **ma:r ɴ′i: wla:wiʟ′** *Máire Ní Mhaolfhábhaill*, **br′i:d′ ɴ′i ko:niʟ′** *Brighid Nic Dhomhnaill*, **t′ax fa:rik′ i: xoha:n′** *teach Phádraig Uí Chatháin* ; and following *Mhac* in a few surnames, e.g. **ʃa:n ək fa:d′i:n′** *Seaán Mhac Pháidín*, **ʃa:n ə ko:niʟ′** *Seaán Mhac Dhomhnaill.*

(xiv) following a fem. forename in certain surnames without prefix, e.g. **aɴə vr′ahnəx** *Anna Bhreatnach.*

[1] Very exceptionally two informants, namely POR and M. Ó Conmhacháin (Gleann a' Ghad), had eclipsis regularly following **gən** *den/don*, e.g. **gən ba:ʃd′** *don bpáiste.*

Lenition of Adjectives

487. The initial consonant of an adjective is lenited

(i) in the nom., dat., and voc., sg. fem., e.g. **də haŋə v′eg** *do theanga bheag*, **p′e:ʃd′ wro:x ɣuf** *péist bhrodhach dhubh*, **uəç ɣãwin′** *uaigh dhomhain*, **er′ ə m′an ɣuf** *ar an mbean dhubh*, **ə v′an xo:r′** *a bhean chóir.*

(ii) in the gen., dat., and voc., sg. masc., e.g. **t′ax əɴ′ ir′ wõ:r′** *teach an fhir mhóir*, **gəɴ′ ar woxd** *don fhear bhocht*, **ə wrumi: wradi:** *a bhromaigh bhradaigh !*

(iii) in the nom. and dat. pl. following a noun ending in a palatal consonant, e.g. **f′e:l′əka:n′ v′egə** *féileacáin bheaga*, **ʃg′i:ha:n′ ɣuwə** *sgiatháin dhubha*, **porta:n′ ɣlasə** *portáin ghlasa*, **sɴə gro:ga:n′ wõ:rə** *sna grógáin mhóra.*

(iv) in the dual, e.g. **ɣa: hu:l′ jarəgə** *dhá shúil dhearga*, **ɣa: waŋəx wõ:rə** *dhá mhangach mhóra.*

(v) in a numeral in the gen. pl. (preceded by a noun), e.g. **ba:d hr′i: ʃo:l** *bád thrí seól*, **p′i:sə he: b′i:ɴ′ə** *píosa shé bpeingne*, **pa:ʃd′ə he: m′i: gə ɣasu:r** *páiste shé mí de ghasúr*, **sdo:r haxd ml′iən gə v′iə** *stór sheacht mbliadhan de bhiadh.*

(vi) preceding a noun either as a prefix or a numeral, under the same conditions as a noun, e.g. **er' ɣroxati:** *ar dhroch-fhataí*, **ənə xu:g' f'i:s** *i n-a chúig phíosa*.

(vii) when it forms the second element of a compound (**d d'**, **s ʃ**, **t t'** excepted following *an-*), e.g. **f'i:rɣan** *fíor-ghann*, **ra arʃin'** *ro-fhairsing*, **g'amxi:x** *geam-chaoch*, **anwog** *an-bhog* ; contrast **andorəx(ə)** *an-dorcha*, **ansosdəx** *an-sostach*, **ansev'ir'** *an-saidhbhir*.

(viii) following parts of the copula ending in *-r* (pret. and cond.), e.g. **na:r wãç ə f'ar** *nár mhaith an fear ?* **na:r ɣunə xrufə ʃe:** *nár dhona a chruthaigh sé ?*

(ix) following **bə** (**b**) *budh* in the case of *m, b, f*, e.g. **bə wãç e:** *budh mhaith é*, **bə woxd** *budh bhocht*, **badə** *b'fhada* ; and sometimes in the case of *c, g*, e.g. **bə xo:r'** *budh chóir*, **bə ɣra:nə** *budh ghránda* ; in the case of *d, t, s*, non-lenition is the rule, e.g. **bə del'i:** *budh doiligh*, **bə tobən** *budh tobann*, **e:n' ar bə sevr'ə ki:r'i:** *aon fhear budh saidhbhre caoirigh*, **əŋ' k'an bə suəri:** *an ceann budh suaraighe*.

Lenition of Verbs

488. The initial consonant of a verb is lenited

(i) in the pret., impf., and cond., active, and in the cond., passive.

(ii) following *ní*, and, except in the pret. passive, following *má*, and *ó*.

(iii) in the active following *ar, cár, gur, munar, nár, níor*.

(iv) following **ə** *a*, used as direct relative, except pret. pass.

(v) in the fut. of *tugaim* and *faghaim*.

The above are general rules : particular exceptions occur.

Lenition of Adverbs and Prepositions

489. Simple (i.e. single word) adverbs are for the most part lenited, e.g. **hanə** *cheana*, **xi:çə** *choidhche*, **har'iʃ** *thairis*, **hart** *thart*, **ha:l** *thall*, **hiər** *thiar*, **her'** *thoir*, **hi:s** *thíos*, **huəs** *thuas* ; so too are some of the prepositions, e.g. **ən** *chun*, **l'e:** *lé*, **har'** *thar*, **himp'əl** *thimcheall*, **hri:** *tré* ; as also the pronominal forms **ugəm** *chugam* etc., **ɣi:m** (beside **di:m**) *d(h)íom* etc., **ɣum** (beside **dum**) *d(h)om* etc., **l'um** *liom* etc., **harəm** *tharam* etc., **hri:m** *thríom* etc.

Eclipsis

Eclipsis of Nouns

490. The initial of a noun is eclipsed

(i) following the singular article preceded by a preposition (other than *de, do*). In the case of initial *d/t*, there is no eclipsis following the article ; in the case of initial *s*, *t* is prefixed, which really represents historic lenition and is not eclipsis, though it would seem to be felt as such in the minds of the speakers of the dialect.

Examples—**er' ə bortəx** *ar an bportach*, **eg' ə m'ehi:x** *ag an mbeathadhach*, **er' ə təihəx** *ar an tsoitheach*.

(ii) following the article in the gen. pl., e.g. **m'i: nə wi:l'i:** *mí na bhFaoillí*.

(iii) following the pl. possessive adjective **ə** *ar, bhar, a*, e.g. **ə gapəl** *ar gcapall*, **ə gid' ar'ig'id'** *bhar gcuid airgid*, **ə gant'** *a gcainnt* ; or following the numeral *dhá* when preceded by the pl. possessive **ə**, e.g. **ənə ɣa: goʃ** *i n-ar dhá gcois*.

(iv) following the numerals *seacht, ocht, naoi, deich*.

(v) following the numerals *trí, ceithre, cúig, sé*, in the gen. pl. ; see § 487 (v).

(vi) following the preposition **ə** *i*, e.g. **ə ba:rk'** *i bpáirc*, **ən' e:r'in'** *i nÉirinn*.

Eclipsis of Verbs

491. The initial of a verb is eclipsed

(i) following **ə** *a* employed as indirect relative, e.g. **ə f'ar ə wil' ə wãk ha:l** *an fear a bhfuil a mhac thall*.

(ii) Following **ə** *a* ' all that ', e.g. **hin' e: ə wuər ʃe:** *sin é a bhfuair sé*.

(iii) following the particles *an, cá, dá, go, muna* **murə/mur**, *nach*.

Provection

h

492. **h** is prefixed to a vowel initial

(a) in nouns

(i) following the article **nə** *na* in the gen. sg. fem. and in the nom., acc., and dat., pl., e.g. **nə hasil'** *na hasail.*

(ii) following the numerals *trí, ceithre, cúig, sé,* e.g. **tr'i: huər'ə** *trí huaire* ; see further § 555.

(iii) following an ordinal, except *an chéad,* e.g. **ən darnə hã:t'** *an darna háit.*

(iv) following the preposition **gə** *go,* e.g. **gə hi:xdər** *go híochtar* ; **l'e:** *lé* is generally not followed by a provected **h**, e.g. **l'e: alt** *lé alt,* **la:n l'e: o:r** *lán lé ór* ; but is, in the phrase **l'e hi:** *lé haghaidh.*

(v) following the fem. sg. possessive adjective **ə** *a,* e.g. **ə huga:n** *a heagán.*

(vi) following **d'e** *Dé* in **d'e hi:n'ə** *Dé hAoine.*

(vii) following **a:** *Ó* in surnames, e.g. **a: hevr'i:n'** *Ó hEimhrín.*

(b) in adjectives

(i) following **axə/əxə/xə** *chomh,* **gə** *go,* e.g. **axə ha:rḍ l'at** *chomh hard leat,* **gə hab'e:l'** *go haibéil.*

(ii) following **gər** *gur* in the case of the adjective **umi:** *iomdha,* e.g. *bhí a fhios aige gur hiomdha ceann a fuair sé.*

(iii) following **n'i:** *ní,* e.g. **n'i: hanən iəd** *ní hionann iad.*

(c) in pronouns

(i) in *é, í, iad, eadh, co, in,* following **n'i:** *ní,* e.g. **n'i: he:/n'i: çe:** *ní hé,* **n'i: hi:/n'i: çi:** *ní hí,* **n'i: hiəd/n'i: çiəd** *ní hiad,* **n'i: həu e:** *ní heo é,* **n'i: hin' e:** *ní hin é.*

(ii) in *é, í, iad,* following **k'e:** *cia,* e.g. **k'e: he:** *cia hé,* **k'e: hi:** *cia hí,* **k'e: hiəd** *cia hiad.*

(d) in verbs

(i) in the pret. passive, e.g. **ha:rdi:f e:** (*do*) *hardaigheadh é,* **n'i:r hinʃi:f** *níor hinnsíodh.*

(ii) in the impv. following **na:** *ná,* e.g. **na: ho:l** *ná hól.*

t t'

493. Following the article, **t t'** *t-* is prefixed to a vowel initial

(i) in a masc. noun in the nom. (and acc.) sg., e.g. **ə tasəl** *an t-asal,* **ə t'iəsg** *an t-iasg.*

(ii) in the numeral adjectives **e:n** *aon,* **e:nhu:** *aonmhadh* **oxdu:** *ochtmhadh,* preceding either a masc. or a fem. noun.

n n', n n'

494. **n n'** is regularly prefixed to a vowel in eclipsis, but **n** is employed before possessive **ə** *a* following any one of the prepositions **fi:** *faoi,* **ə** *i,* **l'e:** *lé,* **a:** *ó,* **hri:** *tré.* Furthermore, following **l'e:**, **n n'** is prefixed to a vowel initial in a verbal noun, e.g. **l'e: n'iç** *lé n-ithe,* **l'e: no:l** *lé n-ól,* **l'e: n'im'əxd** *lé n-imtheacht.*

j

495. (i) Following **bə** *budh,* **j** is prefixed to the pronouns *é, í, iad, eadh, eisean, in* (and presumably also **əu** *eo,* though there is no example of it to hand).

Examples—**bə je:** *budh é,* **bə ji: pali: əŋ' k'an bə suəri: gə nə kapil'** *budh í Polly an ceann budh suaraighe de na capaill,* **bə jiəd bə k'inti:** *budh iad budh ciontaidhe,* **du:rṭ ʃi: gə mə ja** *dubhairt sí go mbudh eadh,* **bə jeʃən kri: nə f'e:l'ə** *budh eisean croidhe na féile,* **bə jin' e:** *budh in é.* Cases occur in which **j** is not so prefixed, e.g. **bi: (ə)n kapəl ə rug i:** *budh í an capall a rug í* (Sb).[1]

(ii) Following the preposition **gə** representing *de/do,* **j** is often inserted before an initial vowel of a noun. In this matter usage varies. The practice is more widespread in Dû Chaocháin than in Faulmore.

Examples from Dû Chaocháin (SOG)—**gə ji:ʃ** *de aois,* **gə je:r'ə** *de Éire,* **gə jar** *de fhear,* but **gə e:n v'iə** *de aon bhiadh.*

In Faulmore insertion of **j** seems to be confined to a few words commencing with **a** (< *ea*) and in particular to **ar** *fhear,* e.g. **sdumpə gə jar** *stumpa de fhear* (Sb, EOM). The usual practice in Faulmore is to say either **gə** or **g** before a vowel or *fh* + vowel, e.g. **d'i:nti: gə i:l** *déanta de aol,* **ə xiḍ' ʃo gə e:r'ə** *an chuid seo de Éire,* **ə lehid'ə ʃo gə ã:t'** *a leithéid seo de áit,* **ku:g' bliənə gə i:ʃ**

[1] Cf. Quiggin, § 190.

cúig bliadhna de aois ; and the following (all from Sb) in which the vowel is elided : **go:n′ baʃd′i:** *d'Eóin Baiste,* **ʃiər duə gələbin′** *siar dtuaidh d'Albain,* **go:rnə** *d'eórna,* **v′i: orəd gãf′e:l orəm** *bhí uiread d'aithmhéala orm,* **ən darnə m′i: gõ:wər** *an darna mí d'fhoghmhar,* **d′iər m′e: gimp′i: er′** *d'iarr mé d'impidhe air,* **la:n p′ig′i:n′ gasgəni:** *lán pigín d'easgannaí,* **ger′əsi: ar′ig′id′** *d'uireasbhaidh airgid,* **gã wil′ ə′wa:n′** *d'aon bhuille amháin,* **mə v′a:xən he:n′ go:r əgəs gar′ig′əd** *mo mheadhachan féin d'ór agus d'airgead.* From Doohoma (AOS) comes **gə jaləx əs gə wi:n′** *de eallach is de mhaoin.*

w v′

496. **w v′** *bh* from *níorbh* and *nárbh* is carried forward and prefixed to an initial vowel or *fh* + vowel, e.g. **n′i:r wadə do: gə wakə ʃe:** *níorbh fhada dó go bhfaca sé,* **n′i:r v′u: l′eʃ ə ʃg′iən ə xur an** *níorbh fhiú leis an sgian a chur ann,* **na:r wadəxən si:l do:** *nárbh fhadachan saoghail dó?* **na:r wi:ntəx ə kapəl i:** *nárbh iongantach an capall í ?*

Chapter XIX

NOUNS AND ADJECTIVES

Declension of Nouns

Class I—Masculine

497. A : Opposition -C, -C′ .[1]

The vowel change in the majority of cases is allophonic. In some cases it is phonemic. The nom. and dat. sg. end in a non-palatal consonant ; the gen. and voc. sg. in a palatal consonant. The form of the nom. pl. is in many cases the same as that of the gen. sg.

498. Monosyllables

(i) The vowel change is allophonic in the following nouns :—

nds.[2]		gs.	ndp.	gp.
alt	*alt*	**alt′**	**alt′**	**alt**
kat	*cat*	**kat′**	**kat′**	**kat**
kran	*crann*	**kran′**	**kran′**	**kran**
gal	*Gall*	**gal′**	**gal′**	**gal**
gas	*gas*	**gaʃ**	**gaʃ**	**gas**
bord	*bord*	**bord′**	**bord′**	**bord**
port	*port*	**port′**	**port′**	**port**
ba:d	*bád*	**ba:d′**	**ba:d′**	**ba:d**
ba:s	*bás*	**ba:ʃ**		
br′a:n	*biorán*	**br′a:n′**	**br′a:n′**	**br′a:n**
o:r	*ór*	**o:r′**		
ro:n	*rón*	**ro:n′**		
plu:r	*plúr*	**plu:r′**		
b′e:l	*béal*	**b′e:l′**		
e:n	*éan*	**e:n′**		
ge:l	*Gaoidheal*	**ge:l′**	**ge:l′**	**ge:l**
l′e:n	*léigheann*	**l′e:n′**		
ʃg′e:l	*sgéal*	**ʃg′e:l′**		
i:l	*aol*	**i:l′**		

[1] C denotes any non-palatal, C′ any palatal, consonant.

[2] Abbreviations :—nds.=nom. and dat. sg. ; gvs.=gen. and voc. sg.; ndp.=nom. and dat. pl.

nds.		gs.	ndp.	gp.
bri:n	*braon*	**bri:n′**		
mi:r	*maor*	**mi:r′**		
ni:w	*naomh*	**ni:v′**	**ni:v′**	**ni:w**
si:l	*saoghal*	**si:l′**		
kəin	*cadhan* [1]	**kəin′**	**kəin′**	**kəin**
gəir	*gaghar* [1]	**gəir′**	**gəir′**	**gəir**
gəur	*gabhar* [1]	**gəur′**	**gəur′**	**gəur**
dəun	*domhan*	**dəun′**		
d′əun	*deamhan*	**d′əun′**	**d′əun′**	**d′əun**
kuən	*cuan*	**kuən′**		
guəl	*gual*	**guəl′**		

(ii) In the case of nouns whose stem vowel is **o**, the vowel change is often phonemic, usually **o** > **e**, sometimes **o** > **i** :—

nds.		gs.	ndp.	gp.
korp	*corp*	**kerp′**		
gob	*gob*	**geb′**	**geb′**	**gob**
pol	*poll*	**pel′**	**pel′**	**pol**
sop	*sop*	**sep′**	**sep′**	**sop**
tor	*tor*	**ter′/tir′**		
klog	*clog*	**klig′**		

(iii) For nouns whose stem vowel is **u**, the vowel change generally is phonemic, **u** > **i** :—

nds.		gs.	ndp.	gp.
bun	*bonn*	**bin′**	**bin′**	**bun**
krūk	*cnoc*	**krīk′**	**krīk′**	**krūk**

(iv) Nouns having **a** following a palatal consonant for the stem vowel give the vowel change **a** > **i**, generally :—

nds.		gs.	ndp.	gp.
k′an	*ceann*	**k′in′**	**k′in′**	**k′an**
p′an	*peann*	**p′in′**		
br′ak	*breac*	**br′ik′**	**br′ik′**	**br′ak**
f′ar	*fear*	**f′ir′**	**f′ir′**	**f′ar**

With composite numerals the pl. of **f′ar** is **f′arə**, e.g. **ox v′arə d′e:g** *ocht bhfeara déag*, **d′e v′arə f′içəd** *deich bhfeara fichead*.

[1] These have also disyllabic forms (occurring in pausa), thus: nds. **kəiən**, **gəiər**, **gəuər**; gs. and ndp. **kəiin′**, **gəiir′**, **gəuir′**.

In the case of the word **mak** *mac* the initial also becomes palatalized, thus: nds. **mak**, gs. **m′ik′**, vs. **ə v′ik′**.

(v) The phonemic vowel change **iə** > **e:** occurs in **kl′iəw**, **iəsg** :—

nds.		gs.	ndp.	gp.
kl′iəw	*cliabh*	**kl′e:v′**	**kl′e:v′**	**kl′iəw**
iəsg	*iasg*	**e:ʃg′**		

499. Disyllables

(i) Where a long vowel occurs in the final syllable, the vowel change in that syllable is merely allophonic :—

nds.		gs.	ndp.	gp.
bud′e:l	*buidéal*	**bud′e:l′**	**bud′e:l′**	**bud′e:l**
kin′e:l	*cainéal*	**kin′e:l′**		
d′in′e:r	*dinnéar*	**d′in′e:r′**		
sip′e:r	*suipéar*	**sip′e:r′**		
orla:r	*orlár*	**orla:r′**		
gasu:r	*gasúr*	**gasu:r′**	**gasu:r′**	**gasu:r**
aru:r	*arbhar*	**aru:r′**		
doxdu:r	*doctúir*	**doxdu:r′**		
səid′u:r	*soighdiúir*	**səid′u:r′**		
ta:l′u:r	*táilliúr*	**ta:l′u:r′**		
p′ekt′u:r	*pictiúr*	**p′ekt′u:r′**		

(ii) In the disyllables in which the vowel of the unstressed syllable is short, the vowel alternation in that syllable is **ə** — **i** :—

nds.		gs.	ndp.	gp.
a:məd	*adhmad*	**a:mid′**		
asəl	*asal*	**asil′**	**asil′**	**asəl**
kapəl	*capall*	**kapil′**		
drehəd	*droichead*	**drehid′**	**drehid′**	**drehəd**
duəlgəs	*dualgus*	**duəlgiʃ**		
asbək	*easbog*	**asbik′**	**asbik′**	**asbək**
gandəl	*gandal*	**gandil′**	**gandil′**	**gandəl**
soləs	*solus*	**soliʃ**	**soliʃ**	

(iii) In certain disyllables the alternation embraces the medial intervocalic consonant also, which becomes palatalized in the gs. and ndp., with consequential phonemic change of the vowel in the stressed syllable:—

nds.		gs.	ndp.	gp.
boləg	*bolg*	**bel'ig'**	**bel'ig'**	
sgoləb	*sgolb*	**sgel'ib'**	**sgel'ib'**	**sgoləb**
gorəm	*gorm*	**ger'im'**		

500. B : Opposition **-əx, -i:** :—

nds.		gs.	ndp.	gp.
i:nəx	*aonach*	**i:ni:**		
bakəx	*bacach*	**baki:**	**baki:**	**bakəx**
baʟəx	*ballach*	**baʟi:**	**baʟi:**	**baʟəx**
b'aləx	*bealach*	**b'ali:**	**b'ali:**	
bruməx	*bromach*	**brumi:**	**brumi:**	**bruməx**
kladəx	*cladach*	**kladi:**	**kladi:**	**kladəx**
kel'əx	*coileach*	**kel'i:**	**kel'i:**	**kel'əx**
anəx	*eanach*	**ani:**		
fraŋkəx	*Frangcach*	**fraŋki:**	**fraŋki:**	**fraŋkəx**
fr'aŋəx	*freangach*	**fr'aŋi:**	**fr'aŋi:**	**fr'aŋəx**
gl'uməx	*gliomach*	**gl'umi:**	**gl'umi:**	**gl'uməx**
markəx	*marcach*	**marki:**	**marki:**	**markəx**
orʟəx	*ordlach*	**orʟi:**	**orʟi:**	**orʟəx**
portəx	*portach*	**porti:**	**porti:**	**portəx**
ʃarəx	*searrach*	**ʃari:**	**ʃari:**	**ʃarəx**
ʃunəx	*sionnach*	**ʃuni:**	**ʃuni:**	**ʃunəx**
seçəx/ səihəx	*soitheach*	**sehi:**	**sehi:**	**seçəx/səihəx**
wuləx	*ualach*	**wuli:**	**wuli:**	

501. C : Opposition **-i:x, -i:**

There are only a few nouns of this type :—

b'ehi:x *beathadhach*, gs. and ndp. **b'ehi:** ; **gaʃg'i:x** *gaisgidheach*, gs. and ndp. **gaʃg'i:**.

502. D :

(i) Opposition **-u:, -i:** :—

nds.		gs.	ndp.	gp.
d'er'u:	*deireadh*	**d'er'i:**		
g'ivr'u:	*geimhreadh*	**g'ivr'i:**		

nds.		gs.	ndp.	gp.
madu:	*madadh*	**madi:**	**madi:**	**madu:**
marəgu:	*margadh*	**marəgi:**	**marəgi:**	
sãwru:	*samhradh*	**sãwri:**		
talu:	*talamh*	**tali:**		

There is another gs. of **talu:**, petrified in the phrase **t'iɴ'əs talu:nə** *teinneas talmhan*.

(ii) Opposition **-u:, -iv'**, with palatalization of medial consonant :—

nds.		gs.	ndp.	gp.
banu:	*banbh*	**ban'iv'**	**ban'iv'**	**banu:**
taru:	*tarbh*	**tar'iv'**	**tar'iv'**	**taru:**

In the case of **ʟ'anu:** *leanabh* there is also change of stem vowel: gs. **ʟ'in'iv'**, vs. **ə l'in'iv'**. The ndp. form is **ʟ'anəbi:**. There seems to be confusion here between the two E. Mod. Ir. words *leanabh* and *leanab* (see Celtica III, p. 97 footnote).

503. In the case of the termination **-a:n** *-án*, palatalization of the final **-n** does not always take place in the gs. In the (local) placenames **'tor 'devl'a:n** *Tor Doivleán* and **drim' ə 'dr'o:la:n** *Druim a' Dreólán* the final **-n** is non-palatal. In connection with nouns belonging to Class A, it should be mentioned that the dat. pl. ending in **-i:** sometimes turns up, especially in nouns terminating in **-a:n**. For an example see t. 54.

Class II—Feminine

504. A : Sg. flexion in three forms. Opposition -C, -C', -C'ə.

(i) Monosyllables in which the change of stem vowel is allophonic :—

ns.		ds.	gs.	ndp.	gp.
sʟat	*slat*	**sʟat'**	**sʟat'ə**	**sʟati:**	**sʟat**
klaɴ	*clann*	**klaɴ'**	**klaɴ'ə**		
klox	*cloch*	**kloç**	**kloçə**[1]	**kloxi:**	**klox**
kos	*cos*	**koʃ**	**koʃə**	**kosi:**	**kos**

[1] Also ds. **kleç** gs. **kleçə** In general, when two or more variants exist, only one, the more regular, or the more commonly used form, is taken into account in this chapter.

ns.		ds.	gs.	ndp.	gp.
lã:w	*lámh*	**lã:v′**	**lã:v′ə**	**lã:wi:**	**lã:w**
br′e:g	*bréag*	**br′e:g′**	**br′e:g′ə**	**br′e:gi:**	**br′e:g**
m′e:r	*méar*	**m′e:r′**	**m′e:r′ə**	**m′e:ri:**	**m′e:r**
bro:g	*bróg*	**bro:g′**	**bro:g′ə**	**bro:gi:**	**bro:g**
kri:w	*craobh*	**kri:v′**	**kri:v′ə**		
əirk	*adharc*	**əirk′**	**əirk′ə**	**əirki:**	**əirk**

(ii) Nouns with alternation **u** — **i** in the stem vowel :—

ns.		ds.	gs.	ndp.	gp.
muk	*muc*	**mik′**	**mik′ə**	**muki:**	**muk**
tuɴ	*tonn*	**tiɴ′**	**tiɴ′ə**		
uw/uf	*ogh*	**if′**	**iv′ə**		

(iii) Nouns with alternation **iə** — **e:** in the stem vowel :—

ns.		ds.	gs.	ndp.	gp.
k′iəl	*ciall*	**k′e:l′**	**k′e:l′ə**		
gr′iən	*grian*	**gr′e:n′**	**gr′e:n′ə**		
iəl	*iall*		**e:l′ə**		

(iv) With alternation **a** — **i** :— **k′ark** *cearc*, ds. **k′irk′**, gs. **k′irk′ə**, ndp. **k′arki:**, gp. **k′ark.**

(v) With alternation **a** — **e** :— **l′ak** *leac*, ds. **l′ek′**, gs. **l′ek′ə.**

(vi) Disyllables, with vowel alternation **ə**—**i** in the unstressed syllable, when the vowel in such syllable is short:—

ns.		ds.	gs.	ndp.	gp.
kaso:g	*casóg*	**kaso:g′**	**kaso:g′ə**	**kaso:gi:**	**kaso:g**
məid′ən	*maighdean*	**məid′in′**	**məid′in′ə**		
sna:həd	*snáthad*		**sna:hid′ə**		
asgən	*easgann*		**asgiɴ′ə**	**asgəni:**	
olən	*olann*		**oliɴ′ə**		
kolən	*colann*		**koliɴ′ə**		

505. B : Sg. flexion in two forms. Opposition -C′, -C′ə.

(i) Monosyllables :—

nds.		gs.
ã:t′	*áit*	**ã:t′ə**
i:ʃ	*aois*	**i:ʃə**

nds.		gs.
b′iɴ′	*beinn*	**b′iɴ′ə**
kant′	*cainnt*	**kant′ə**
k′erd′	*ceird*	**k′erd′ə**
d′e:rk′	*déirc*	**d′e:rk′ə**
gruəj	*gruaidh*	**gruəjə**
meL′	*moill*	**meL′ə**
p′i:ɴ′	*peinginn*	**p′i:ɴ′ə**
p′e:ʃd′	*péist*	**p′e:ʃd′ə**
sgol′	*sgoil*	**sgol′ə**
ʃL′ej/ʃL′eç	*sleigh*	**ʃL′ejə**
sb′e:r′	*spéir*	**sb′e:r′ə**
ʃra:d′	*sráid*	**ʃra:d′ə**
su:l′	*súil*	**su:l′ə**
t′i:r′	*tír*	**t′i:r′ə**
uər′	*uair*	**uər′ə**

(ii) Disyllables :—

nds.		gs.
amʃir′	*aimsir*	**amʃir′ə**
blago:d′	*blagóid*	**blago:d′ə**
bel′ig′	*boilg*	**bel′ig′ə**
karik′	*carraig*	**karik′ə**
dr′aŋkid′	*deargnait*	**dr′aŋkid′ə**
f′arhiɴ′	*fearthain*	**f′arhiɴ′ə**
guəliɴ′	*gualainn*	**guəliɴ′ə**
in′i:n′	*inghin*	**in′i:n′ə**
ʃaxdin′	*seachtmhain*	**ʃaxdin′ə**
ʃg′il′iɴ′	*sgilling*	**ʃg′il′iɴ′ə**
sder′im′	*stoirm*	**sder′im′ə**
gaL′iv′	*Gaillimh*	**gaL′iv′ə** (SOG)

iɴ′u:n′ *inneóin*, at least as it occurs in a placename (in Doivleán Mór), has mixed gender, thus : ns. **ən′ t′iɴ′u:n′ L′ahən** *An tInneóin Leathan*, gs. **gob nə hiɴ′u:n′ə** *Gob na hInneóine*. **obir′** *obair* is syncopated in gs. **ebr′ə**, and ndp. **ebr′əxi:**. **əuiɴ′/əuɴ′** *abhainn* makes gs. **evɴ′ə**, ndp. **evɴ′əxi:**.

506. C : Sg. flexion in two forms. Opposition **-əx, -i:** :

ns.		dgs.
aŋəx	*eangach*	**aŋi:**
bantr'əx	*baintreabhthach*	**bantr'i:**
kaʟ'əx	*cailleach*	**kaʟ'i:**
k'iʃd'ənəx	*cisteanach*	**k'iʃd'əni:**
g'aləx	*gealach*	**g'ali:**
gr'i:səx	*gríosach*	**gr'i:si:**
ʟimr'əx	*Luimneach*	**ʟimr'i:**
u:nʃəx	*óinseach*	**u:nʃi:**
torɴ'əx	*toirneach*	**torɴ'i:**

There are nouns belonging to this category which have the **i:** ending in the ns., e.g. **klasi:** *clasaigh*, **tarʃi:** *tairsigh*.

507. D. Standing as a type apart is the noun **gan'u:/gan'i:** *gaineamh* with opposition **-u:, -i:** ; ns. **gan'u:/gan'i:**, dgs. **gan'i:**.

Class III

508. A (i) : Opposition -C, -Cə, in some cases with change in stem vowel, and in some cases with syncope:

nds.		gs.
ʃro:n	*srón*	**ʃro:nə**
gl'aɴ	*gleann*	**gl'aɴə**
f'is	*fios*	**f'asə**
ʃuk	*sioc*	**ʃakə**
ʃrahər	*srathar*	**ʃrahrə**

509. A (ii) : Opposition -C', -Cə, in some cases with change of stem vowel in monosyllables, and with alternation **i—ə** in the unstressed syllable of disyllables, when such syllable contains a short vowel:

nds.		gs.
bl'iən'	*bliadhain*	**bl'iənə**
ka:ʃg'	*Cáisg*	**ka:sgə**
drim'	*druim*	**drumə**
gr'im'	*greim*	**gr'amə**
m'il'	*mil*	**m'alə**
una:l'	*anáil*	**una:lə**
asgiʟ'	*asgaill*	**asgəʟə**
ahir'	*athair*	**ahərə**
dr'içə:r'	*dearbh-bhráthair*	**dr'içə:rə**

ma:hir'	*máthair*	**ma:hərə**
t'o:riɴ'	*teórainn*	**t'o:rəɴə**

510. B (i) : Opposition -C', -Cəx, in some cases with change in stem vowel :

nds.		gs.
kəul'	*cabhail*	**kəuləx**
kart'	*cairt*	**kartəx**
go:l'	*gabháil*	**go:ləx**
ʟa:r'	*láir*	**ʟa:rəx**
kid'	*cuid*	**kodəx**
tel'	*toil*	**toləx**

511. B (ii) : Opposition -Cə, -Cəx :
nds. **ki:rə** *caora*, gs. **ki:rəx**.

512. B (iii) : Opposition **-i:, -əx** :
nds. **kõ:li:** *comhla*, gs. **kõ:ləx** ; and with syncope: nds. **dũ:i:** *dumhaigh*, gs. **dũ:x**, nds. **dəui:** *dabhaigh*, gs. **dəux**.

513. C (i) : Opposition -C', -C'u:/-Cu:, in some cases with change in stem vowel:

nds.		gs.
k'iʟ'	*cill*	**k'iʟ'u:**
keʟ'	*coill*	**keʟ'u:**
f'o:l'	*feóil*	**f'o:lu:**
fil'	*fuil*	**folu:**
ʟuəç	*luaith*	**ʟuəhu:**
m'in'	*min*	**m'in'u:**
mo:n'	*móin*	**mu:nu:**

514. C (ii) : Opposition **-i:/ə, -u:** :

nds.		gs.
k'a:rti:/ə	*ceardcha*	**k'a:rtu:**
ʟ'e:n'i:/ə	*léine*	**ʟ'e:n'u:**
t'in'i:/ə	*teine*	**t'in'u:**

Somewhat similarly declined is **farig'ə** *fairrge*, gs. **ə m'e:l ɴə farig'u:** *i mbéal na fairrge*, but **ə m'e:l ɴə farig'ə mo:r'ə** *i mbéal na fairrge móire*. Cf. also **k'o: ɴə fr'i:d'u:** *ceó na frighde(adh)*.

515. D : Opposition **-x(ə), -xən** :

nds.		gs.	ndp.	gp.
fi:x(ə)	*faocha*	**fi:xən**	**fi:xin'**	**fi:xən/n'**
ʟax(ə)	*lacha*	**ʟaxən**	**ʟaxin'**	**ʟaxən/n'**
m'ax	*beach*	**m'axən**	**m'axin'**	**m'axən/n'**

Class IV

516. This class comprises all nouns uninflected in the sg. There are several categories with very little in common.

517. A (i) : The pl. is formed by adding **-i:** to the sg., sometimes with syncope :

sg.		pl.
ba:do:r'	*bádóir*	**ba:do:r'i:**
boxiʟ'	*buachaill*	**boxiʟ'i:**
m'in'iʃd'e:r'	*ministéir*	**m'in'iʃd'e:r'i:**
kal'i:n'	*cailín*	**kal'i:n'i:**
ma:ʃd'ir'	*maighistir*	**ma:ʃdr'i:**

518. A (ii). Here are grouped disyllabic and trisyllabic nouns ending in **-əxd**, or in **-i:xd**, e.g. **b'aNəxd** *beannacht*, **maʟəxd** *mallacht*, **marki:xd** *marcaigheacht*.

519. B (i). The majority of nouns ending in **-ə** following a non-palatal consonant form their pl. by substituting **-i:** for **-ə**. Very many borrowed words belong to this category, e.g. **p'atə** *peata*, **posdə** *posta*, **potə** *pota*, **ʃupə** *siopa*, **sdokə** *stoca*. Nouns ending in **-ə** following a palatal consonant likewise in many cases form their pl. by the substitution of **-i:** for **-ə**, e.g. **br'i:ʃd'ə** *bríste*, **biʟ'ə** *buille*, **dr'e:m'ir'ə** *dréimire*, **pa:ʃd'ə** *páiste*, **ro:gir'ə** *rógaire*, **ʃel'im'id'ə** *seilmide*.

520. B (ii). This group comprises monosyllabic nouns ending in a long vowel, and forming their plurals in different ways.

Examples—**bla:** *bláth*, pl. **bla:Ni:** ; **kru:** *crú*, pl. **kri:t'i:** /**kri:hi:** ; **g'e:** *géadh*, pl. **g'e:wi:** .

521. B (iii). In the case of disyllabic nouns of agency (and others) the sg. ending **-i:** is replaced by **-i:f** (or **-içu:**) in the pl., e.g. **gadi:** *gadaighe*, pl. **gadi:f** (or **gadiçu:**) ; **g'u:di:** *Iúdaighe*, pl. **g'u:di:f** (or **g'u:diçu:**).

522. B (iv). Nouns of this category are for the most part nouns of agency and are trisyllabic. Sg. and pl. forms are the same, a fact that gives rise to ambiguity sometimes. For example **bu:ʃd'e:ri:** *búistéaraí* means both 'butcher' and 'butchers'. Similarly **f'el'im'e:ri** *feilméaraí*, **fevl'e:ri:** *foibhléaraí*, **ʃevN'e:ri:** *seibhnéaraí*, **ʃi:p'e:ri:** *sípéaraí*, **sdranʃe:ri:** *strainséaraí*, **ʈiŋk'e:ri:** *tincéaraí*, are both sg. and pl. forms. Likewise the following trisyllabic nouns have the same form for both sg. and pl. : **kumra:di:** *comrádaidh*, **d'i:ʟ'əxdi:** *dilleachtaidh*, **t'ino:nti:** *tionóntaidh*.

Class V

523. The gs. of verbal nouns usually coincides in form with the past participle.

Examples—**ʃiəbu:** *siabadh*, gen. occurring in phr. **i:ç əN' t'iəpi:** *oidhche an tsiabtha* ; **f'aNu:** *feannadh*, gen. in phr. **arəx əN' aNti:** *carrach an fheannta* ; **dahu:** *dathughadh*, gen. in phr. **m'i: ɣat'ə nə sm'e:r** *mí dhaite na sméar* ; **krahu:** *crathadh*, gen. in phr. **m'i: xrat'ə nə sak** *mí chraite na sac*; **ba:hu:** *báthadh*, gen. in **d'iʟ'o:gi: ba:t'i:** *duilleóga báite* ; **ki:n'u:** *caoineadh*, gen. in **b'an ə xi:nt'ə** *bean a chaointe* ; **ʃi:n'u:** *síneadh*, gen. in **f'ar ə hi:nt'ə** *fear a shínte*. Further examples are **koʟu:** *codladh*, gen. in **ʟ'abə xoʟətə** ; **ku:nu:** *congnamh*, gen. in **lã:w xu:Ntə** *lámh chonganta* ; **sʟaN'u:** *sloinneadh*, gen. in **an'im' ə nəi əN tlant' ə tugu: orəms** *ainm i n-aghaidh an tsloinnte a tugadh orm-sa*.

Irregular Nouns

524. The following cannot easily be fitted into any of the categories set out above and are best treated as heteroclites :

b'an *bean*, ds. **mrĩ:/b'an**, gs. and ndp. **mrã:**

bo: *bó*, ds. **bin'/bo:**, ndp. **bah**

bro: *bró*, gs. **bro:n'ə**, ndp. **bro:nt'i:**

d'er'(ə)hu:r *deirbh-shiúr*, gs. **d'er'if'i:r'ə**, ndp. **d'er'hu:rəxi:**, gp. **d'er'if'a:r**

e:r'ə *Éire*, ds. **e:r'iN'/e:r'ə**, gs. **nə he:r'əNə**

f'içə *fiche*, ds. **f'içid'**, gs. **f'içəd**, pl. **f'içid'**, dual nom. **da: içəd**

ʟa: *lá*, gs. **ʟe:**, pl. **ʟohəNti:/ʟehəNti:**
